Re: Christie Peak Express Chairlift Wood Platform  
Lower Terminal  
Steamboat Springs, Colorado  
Anthem Job Number 22-023

Dear Alec:

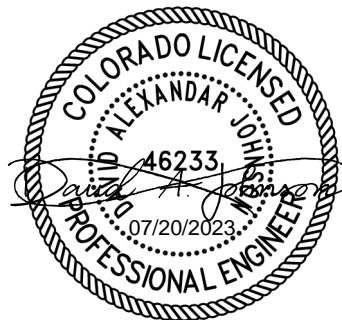

Anthem Structural Engineers (Anthem) provided the structural engineering design for the referenced project. Our records indicate that during the course of construction, Anthem reviewed several photos provided by the contractor / architect for general conformance with the Construction Documents. Anthem was not called out to perform any structural observations for this deck due to the minor nature of the structure and because the deck was largely designed in accordance with the conventional light-frame construction provisions of Chapter 23 of the IBC. Anthem has reviewed shop drawings and numerous Requests for Information (RFI) for compliance with the Construction Documents. In addition, Anthem has informed the General Contractor of any required corrections at noted deviations from the Construction Documents.

Based on our review of the photos provided to Anthem, the overall structure including foundations appear to be in general compliance with the Construction Documents.

Based on information provided by the General Contractor and reviewed by Anthem, the above structural items, to the best of our knowledge, substantially conform to the Construction Documents prepared by Anthem. It should be noted that Anthem reviews to date are based on photos of representative elements of the structure only and that there is no claim, either stated or implied, that all conditions were reviewed.

Sincerely,

ANTHEM
