

(12) sheets Finish Upgrades to Café Public Washrooms plans dated 4/14/23 by Vibe Design Collective. These are not revisions to previously submitted drawings. These depict entirely new scope and simply describe the removal and replacement of all fixtures and finishes within a restroom pod to update and modernize the space.

(12) sheets Finish Upgrades to South Public Washrooms plans dated 4/14/23 by Vibe Design Collective: These are also not revisions to previously submitted drawings. These depict entirely new scope and simply describe the removal and replacement of all fixtures and finishes within a second restroom pod to update and modernize the space.

(39) sheets Electrical Plans dated 11/15/23 by MEP Engineering. These are not revisions to any previously submitted sheets, but rather new sheets describing an expansion of scope onto other floors of the building. The originally permitted drawings depicted lighting fixture replacements only at Levels 2 and 5. Now these new sheets depict the same lighting fixture replacements at Levels 3, 4, 6, and 7.

(5) sheets Plumbing Plans dated 1/8/24 by MEP Engineering. Again, these are not revisions to any previously submitted sheets, but rather completely new and separate scope describing temporary domestic water to commercial tenants. The originally permitted drawings depict the removal and replacement of domestic water throughout the building. This requires us to shut down the domestic water to the building for the duration of the project. The building will be vacant except for the first floor commercial tenant spaces who would like to remain open for business. Now these new sheets depict a means by which the commercial first floor tenants may still have water so that their businesses can operate while the rest of the building is shut down.
