No structural plans have been provided, due to the simplicity of the sign/installation. The below is from the sign designer and installer (Steamboat Woodsmith) re: installation method for the sign:

"The sign will be attached with qty (6) - #10 4-1/2" wood screws (good to hold up about 1000 lbs and the sign will only weigh about 60 lbs).

Two screws will be fastened vertically in the middle (top and bottom of sign) and two on each side spaced equally to the the outer edge. The sign will be braced in three spots."
