NOTES: *NOTIFY ENGINEER OF ANY DISCREPANCIES BETWEEN MODEL NUMBERS AND DESCRIPTIONS PRIOR TO ORDERING
*VERIFY CEILING INSULATION W/ GC AND NOTIFY ENGINEER OF ANY IC RATING CONFLICTS PRIOR TO ORDERING

GENERAL NOTES

A. ANY PROPOSED LIGHT FIXTURES ARE TO INSTALLED ON PRIVATE PROPERTY, ADJACENT TO THE PUBLIC RIGHT OF WAY. LIGHT FIXTURES SHALL BE ORIENTED IN SUCH A MANNER OR LIMITED IN LUMEN OUTPUT TO PREVENT GLARE PROBLEMS AND SHALL NOT EXCEED NATIONAL I.E.S. LIGHTING STANDARDS FOR DISABILITY GLARE.

B. ALL FIXTURES SHALL BE FULL CUT-OFF, DARK SKY COMPLIANT. RE: EXTERIOR LUMINAIRE SCHEDULE AND ATTACHED CUTSHEETS FOR ADDITIONAL INFORMATION.

C. ALL EXTERIOR LIGHTING FIXTURES TO BE CONTROLLED VIA TIMECLOCK AND/OR PHOTO SENSORS. RE: ONE LINE DIAGRAM FOR ADDITIONAL INFORMATION.

D. REFER TO ATTACHED COMCHECK COMPLIANCE DOCUMENTATION FOR ALLOWED/INSTALLED WATTAGE OF PROPOSED EXTERIOR LIGHTING FIXTURES.

E. VERIFY POLE HEIGHT REQUIRED AT EACH LOCATION WITH BASE HEIGHT AND SURROUNDING GRADE. ELEVATION PROVIDED IN LUMINAIRE SCHEDULE IS HEIGHT OF FIXTURE TO ADJACENT GRADE.

DETAIL NOTES THIS SHEET

1. PROPOSED LOCATION FOR DIESEL GENERATOR. COORDINATE EXACT LOCATION IN FIELD. MAINTAIN ALL REQUIRED CLEARANCES.
2. PROPOSED LOCATION OF NEW UTILITY PROVIDED TRANSFORMER, FIELD VERIFY EXACT LOCATION AND INSTALLATION REQUIREMENTS WITH LOCAL UTILITY PROVIDER. PROVIDE BOLLARDS AS REQUIRED TO PROTECT ELECTRICAL GEAR PER UTILITY STANDARDS. MAINTAIN ALL REQUIRED CLEARANCES.
3. BUILDING ELECTRICAL SERVICE ENTRANCE LOCATION. PROVIDE REQUIRED CLEARANCES PER NEC. COORDINATE LOCATION, GEAR HEIGHT AND INSTALLATION SPECIFICS WITH G.C. AND ARCHITECT. PROVIDE BOLLARDS AS REQUIRED TO PROTECT ELECTRICAL GEAR PER UTILITY STANDARDS, COORDINATE BOLLARD PLACEMENT AND INSTALLATION REQUIREMENTS WITH G.C. RE: ONE LINE DRAWING FOR ADDITIONAL INFORMATION.
4. APPROXIMATE LOCATION OF TELE/COM PEDESTAL(S). COORDINATE EXACT LOCATION AND REQUIREMENTS WITH TECHNOLOGY DRAWINGS.
5. COORDINATE LOCATIONS FOR EV READY/CAPABLE SPACES WITH ARCHITECT/OWNER. EV ELECTRICAL DEVICES SHOWN FOR CIRCUITING AND COORDINATION. PROVIDE BOLLARDS AS REQUIRED TO PROTECT ELECTRICAL EQUIPMENT.
6. EXTEND AND CONNECT NEW SANITARY WASTE TO CIVIL POINT OF CONNECTION (POC) IN AREA SHOWN. PROVIDE 2-WAY CLEANOUT AT SANITARY WASTE/SEWER JUNCTION AT EXTERIOR OF BUILDING. FIELD VERIFY EXACT LOCATION AND INVERT ELEVATION AT POINT OF CONNECTION.
7. EXTEND AND CONNECT NEW DOMESTIC COLD WATER PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. BASIS OF DESIGN IS INTERIOR METER WITH 1-1/2" TAP/METER ASSEMBLY.
8. EXTEND AND CONNECT NEW FIRE PROTECTION PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. COORDINATE FIRE RISER ROOM LOCATION WITH G.C. COORDINATE FDC LOCATION WITH AHJ. SPRINKLER DESIGN TO BE PERFORMED BY NFPA CERTIFIED DESIGNER, SHOP DRAWINGS BY DEFERRED SUBMITTAL.
9. COORDINATE WITH LOCAL UTILITY COMPANY FOR 7"W.C. GAS SERVICE. FIELD VERIFY EXACT METER PLACEMENT WITH UTILITY PROVIDER, NOTIFY ENGINEER IF METER IS RELOCATED FROM LOCATION SHOWN. REGULATORS MUST BE INSTALLED AT APPLIANCES PRIOR TO GAS BEING TURNED ON.
10. EXTERIOR LIGHTING TO BE CONTROLLED VIA TIMECLOCK. COORDINATE HOURS OF OPERATION WITH OWNER/ARCHITECT.

NOTES: THE INDIVIDUAL LOADS ARE NOT SHOWN AND BREAKERS ARE FOR SIZNG AND CIRCUITING PURPOSES. THE DEMAND LOAD SHOWN IS PER NEC 220.82. 10KW + 40% OF (1) LAUNDRY CIRCUIT, (2) APPLIANCE CIRCUITS, 3W/SF FOR GENERAL LIGHT & RECEPTACLES, FIXED APPLIANCE & OTHER MOTOR LOADS. PLUS 100% OF LARGEST OF HEATING / COOLING LOADS.

ELECTRICAL GENERAL NOTES - UNITS

A. REPLACE MINI-HORN WITH HORN/STROBE IN ACCESSIBLE UNITS.

B. PROVIDE ARC-FAULT CIRCUIT INTERRUPTER PROTECTION FOR RECEPTACLES, LIGHTS, SMOKE DETECTORS, ETC. IN RESIDENCE PER NEC 210.12.

C. ALL DWELLING UNIT RECEPTACLES LISTED PER NEC 406.12 SHALL BE TAMPER RESISTANT TYPE.

D. ELECTRICAL BOXES INSTALLED IN FIRE-RATED WALLS AND PARTITIONS MUST COMPLY WITH THE REQUIREMENTS OF IBC 714.3.2. IF STEEL BOXES ARE USED IN FIRE RATED WALLS, BOX OPENINGS SHALL NOT BE LARGER THAN 16 SQ. IN. WITH A TOTAL AREA OF SUCH OPENINGS IN THE WALL NOT EXCEEDING 100 SQ. IN. FOR ANY 100 SQ. FT. OF WALL AREA.

E. OUTLET BOXES ON THE OPPOSITE SIDES OF THE FIRE RATED WALLS SHALL BE SEPARATED BY A MINIMUM OF 24" HORIZONTALLY, UNLESS FIRE BLOCKING METHODS LISTED IN IBC 714.3.2 ARE EMPLOYED.

F. CIRCUITS SHOWN ON THE ELECTRICAL UNIT PLANS SHALL BE WIRED TO THE TYPICAL UNIT PANEL UNLESS OTHERWISE STATED ON THE PLANS.

G. ELECTRICAL FIXTURES AND DEVICES MAY BE OFFSET ON THE PLANS FOR GRAPHICAL CLARITY. COORDINATE EXACT LOCATIONS WITH THE ARCHITECT/OWNER PRIOR TO ROUGH-IN.

H. ALL ABOVE COUNTER RECEPTACLES ARE TO BE INSTALLED AT 42" A.F.F.

I. GFCI PROTECTION TO BE PROVIDED AT PANEL, UNLESS SPECIFICALLY NOTED TO BE PROTECTED LOCALLY ON DRAWINGS.

J. RESIDENTIAL SURGE PROTECTION TO BE PROVIDE AT PANEL PER NEC 230.67.

K. PROVIDE SMOKE / CARBON MONOXIDE DETECTORS IN ALL RESIDENTIAL UNITS PER LOCAL FIRE DEPARTMENT REQUIREMENTS.

ELECTRICAL DETAIL NOTES - UNITS

NOTE: THESE NOTES ARE TYPICAL FOR ALL UNIT PLANS, NOT ALL NOTES MAY APPEAR ON EVERY UNIT TYPE.

1. UNIT TELEPHONE/CABLE TERMINAL; FIELD VERIFY LOCATION AND MOUNTING HEIGHT ON WALL WITH TELECOM SERVICE PROVIDER. COORDINATE LOCATION WITH CLOSET SHELVING, LOCATE DUPLEX RECEPTACLE BELOW TERMINAL FOR CONNECTION OF TELECOM EQUIPMENT. RE: TELEPHONE/CABLE DETAIL FOR ADDITIONAL INFORMATION.
2. TYPICAL UNIT ELECTRICAL PANEL, COORDINATE PANEL MOUNTING HEIGHT WITH ADA REQUIREMENTS (IN ACCESSIBLE UNITS). MAINTAIN MINIMUM CLEARANCE TO FRONT OF PANEL AS REQUIRED PER NEC, NO PIPING, DUCTWORK OR OTHER TRADES WORK TO BE ROUTED OVER PANEL. ALL WORK IN THIS AREA TO BE COORDINATED WITH G.C. AND E.C.
3. PROVIDE RECEPTACLE WITH HALF SWITCHED PORT. TOP RECEPTACLE IS TO BE SWITCHED PORTION FOR GARBAGE DISPOSAL OPERATION. POWER CONNECTION FOR DISHWASHER, DISPOSAL AND DISPOSAL SWITCH LOCATED BELOW COUNTERTOP IN BASE CABINET. FIELD VERIFY DISPOSAL SWITCH LOCATION WITH OWNER PRIOR TO ROUGH-IN.
4. BATHROOM VENTILATION FAN CONTROL VIA AIR CYCLER SMART EXHAUST SWITCH, PROGRAM PER VENTILATION SCHEDULE FOR UNIT TYPE. COORDINATE WIRING WITH M.C.
5. EXTERIOR LUMINAIRE, SWITCH AND EXTERIOR WEATHER PROOF RECEPTACLE TO BE PROVIDED AT BALCONY.
6. ADD ALTERNATE: PROVIDE ADDITIONAL PRICING TO INCLUDE FAN RATED CEILING JUNCTION BOX AND 2 GANG WALL SWITCH. 1 SWITCH FOR FAN/OVERHEAD LIGHTING AND 1 SWITCH FOR FAN BLADE OPERATION.

RESIDENTIAL ELECTRICAL LEGEND

	MECHANICAL EQUIPMENT; WIRE TO PANEL PER MECHANICAL EQUIPMENT SCHEDULE ON SCHEDULES AND DETAILS SHEET.
MICRO/ HOOD	(2-#12) COORDINATE HOOD REQUIREMENTS W/ ARCHITECT. (COMBINATION HOOD MICROWAVE UNIT)
RANGE	208/1, (2-#6) SPECIAL PURPOSE OUTLET. COORDINATE CONFIGURATION W/ ARCHITECT.
DRYER	208/1, (2-#10) SPECIAL PURPOSE OUTLET. COORDINATE CONFIGURATION W/ ARCHITECT.
	DATA & TELEPHONE
	CABLE TELEVISION
	SMOKE DETECTOR (LOCAL ONLY); INTERWIRED W/BATTERY BACKUP
	COMBINATION CARBON MONOXIDE / SMOKE DETECTOR (LOCAL ONLY); INTERWIRED W/BATTERY BACKUP
M	MINI HORN
S	HORN/STROBE
	DOOR BELL (NUTONE PB-18LWH, 101T, LB-12WW)

MECHANICAL GENERAL NOTES - UNITS

A. FLEX DUCT MAY NOT BE USED IN EXPOSED LOCATIONS. WHERE CONCEALED, FLEX DUCT RUNS NO LONGER THAN 2', REFER TO SPECIFICATIONS.

B. GRILLES, REGISTERS & DIFFUSERS & EXPOSED DUCTWORK TO MATCH ADJACENT CEILING/STRUCTURE COLOR. WHERE CEILING IS LIGHT COLOR, MAINTAIN WHITE GRD'S. WHERE CEILING/STRUCTURE IS METAL FINISH OR DARK, PAINT GRD'S TO MATCH. REFER TO ARCH PLANS FOR FINISHES.

C. ROUTE ALL EXHAUST DUCTWORK ABOVE FIRE-RATED CEILING BETWEEN AND THRU TRUSSES UNLESS OTHERWISE NOTED. AVOID SOLID STRUCTURAL BEAMS. IN ATTIC SPACE, INSULATE PER SPECIFICATIONS.

D. INSTALL RADIATION DAMPER AT ALL CEILING PENETRATIONS. DAMPER TO BE UL-LISTED FOR RATED ASSEMBLY BEING PENETRATED.

E. VERIFY LOCATIONS AND RATING OF ALL RATED ASSEMBLIES WITH GC AND ARCHITECT DURING CONSTRUCTION. PROTECT PENETRATIONS PER UL INSTRUCTIONS.

F. RANGE HOOD IS RECIRCULATING AND BY ARCHITECT. PROVIDE ACCESSIBLE CONTROLS IN ADA TYPE-A RANGE HOOD.

G. PROVIDE 1.25" UNDERCUT AT ALL BEDROOM DOORS.

H. OUTSIDE AIR INTAKE ON PTHP TO BE CLOSED OFF. VENTILATION PROVIDED BY VF-1 IN EACH UNIT. SEE VENTILATION CALCULATION, THIS SHEET.

MECHANICAL DETAIL NOTES - UNITS

NOTE: THESE NOTES ARE TYPICAL FOR ALL UNIT PLANS, ALL NOTES MAY NOT APPEAR ON EVERY UNIT TYPE PLAN.

1. MOUNT BATHROOM VENTILATION FAN IN CEILING & ROUTE 4"Ø THRU OPEN WEB TRUSSES. PROVIDE BACKDRAFT DAMPER AT TERMINATION. SET FAN VENTILATION TIMER PER TABLE FOR UNIT TYPE, VENTILATION SWITCH TO BE AIR CYCLER SMART EXHAUST, COORDINATE WIRING WITH E.C.
2. MOUNT KITCHEN VENTILATION FAN IN CEILING OR SIDEWALL, ROUTE EXHAUST DUCT THRU OPEN WEB TRUSSES AND TERMINATE IN WALL CAP WITH BACKDRAFT DAMPER. FAN TO OPERATE VIA MANUAL SWITCH IN KITCHEN, COORDINATE WIRING WITH E.C.
3. 4"Ø DRYER VENT FROM DRYER BOX (IN-O-VATE TECH OR EQUIV.) ROUTE BEHIND DRYER IN WALL UP THRU TOP PLATE AND THRU OPEN WEB TRUSSES TO EXTERIOR WALL WITH BACKDRAFT DAMPER AT TERMINATION. ALL HORIZONTAL TURNS TO BE "LONG TURN" ELL'S (IN-O-VATE TECHNOLOGIES OR EQUIV.) INSTALL VENT PER MANUFACTURER'S REQUIREMENTS. VENT NOT TO EXCEED X' TOTAL LENGTH W/ (Y) 90° ELBOWS. REFER TO PLANS FOR LENGTH AND ELBOW QUANTITIES FOR EACH UNIT. PROVIDE PERMANENT LABEL "DRYER MUST BE APPROVED FOR X' W/ (Y) ELBOW BY MANUFACTURER." WHERE THRU UNCONDITIONED SPACE, INSULATE WITH R-8 DUCTWRAP. WHERE DRYER BOX IS SHOWN ON SIDE OF W/D CLOSET, DRYER TO BE CONVERTED TO SIDE VENT. COORDINATE WITH G.C.
4. PROVIDE 1" DOOR UNDERCUT AND 14"x8" "R2" TRANSFER GRILLES ABOVE LAUNDRY ROOM DOOR FOR A MINIMUM TOTAL OF 100 SQ.IN. FREE AREA. COMPLY WITH WASHER AND DRYER MANUFACTURER'S INSTALLATION REQUIREMENTS. COORDINATE WITH ARCHITECT PRIOR TO INSTALLATION. PROVIDE (2) GRILLES - ONE GRILLE ON EITHER SIDE OF WALL.
5. SEE ENVIRONMENTAL EXHAUST WALL TERMINATION DETAIL ON SHEET M0601. TERMINATIONS MUST BE 3'-0" MINIMUM FROM ANY BUILDING OPENINGS. SEE ARCHITECTURAL ELEVATIONS FOR TERMINATION LOCATION.
6. MOUNT BATHROOM EXHAUST FAN IN CEILING & ROUTE 4"Ø THRU OPEN WEB TRUSSES. WALL SWITCH CONTROL. COORDINATE WIRING WITH E.C.
7. ROUTE EXHAUST/DRYER UP INTO ATTIC SPACE, ELBOW NORTH AND TERMINATE IN WALL. SEE SHEET M0161 FOR CONTINUATION.
8. ROUTE EXHAUST/DRYER UP IN CHASE ABOVE, ELBOW AND TERMINATE IN WALL. SEE SHEET M0161 FOR CONTINUATION.
9. GROUND LEVEL UNIT ONLY: DO NOT INSTALL PTHP DUE TO GRADE/SITE RESTRICTIONS. INSTALL ELECTRIC BASEBOARD AS SHOWN AND USE T'STAT LOCATION SHOWN FOR MAIN LIVING AREA.

14	494	1	9.00	30	26	30	1	23

NOTES:
1. BASED ON VF-1 AIRFLOW RATE OF 80 CFM
2. ASHRAE CALCULATION BASED ON ASHRAE 62.2-2013 EQUATION BELOW.
VENTILATION RATE = 0.03 X AREA + 7.5(BEDROOMS +1)

PLUMBING GENERAL NOTES - UNITS

A. WATER, SEWER, GAS AND ELECTRICAL CONDUITS MUST FIT WITHIN WALLS. CONFLICTS WITH OTHER TRADES MUST BE COORDINATED OR WORK WILL BE REDONE.

B. COORDINATE ALL EQUIPMENT LOCATIONS, PIPE ROUTING, AND EXACT LOCATIONS WITH LIGHTS, HVAC, STRUCTURE, AND ALL OTHER TRADES PRIOR TO BEGINNING WORK.

C. REFER TO SCHEDULES, DIAGRAMS, AND ISOMETRIC DIAGRAMS FOR ALL PIPE SIZES NOT SHOWN ON PLANS.

D. COORDIANATE EXACT FIXTURE ROUGH-IN LOCATIONS , DIMENSIONS AND ELEVATIONS WITH ARCHITECTURAL DRAWINGS.

E. ACCESIBLE AND ADAPTABLE UNITS SHALL HAVE ADA FIXTURES AND MEET ALL APPLICABLE ADA STANDARDS AND REQUIREMENTS. COORDINATE FIXTURE SELECTION AND ROUGH-IN LOCATIONS WITH ARCHITECT / OWNER / GC.

PLUMBING DETAIL NOTES - UNITS

NOTE: THESE NOTES ARE TYPICAL FOR ALL UNIT PLANS, NOT ALL NOTES MAY APPEAR ON EVERY UNIT TYPE.

1. ROUTE 1/2" DOMESTIC HOT WATER IN CASEWORK FROM SINK TO DISHWASHER CONNECTION. PROVIDE DEDICATED ISOLATION VALVE WITH SHOCK ARRESTOR ON WATER SUPPLY. ROUTE WASTE PIPING FROM DISHWASHER TO 2" HD IN CASEWORK, CONNECT VIA 1" AIRGAP AND SECURE DISHWASHER DISCHARGE HOSE TO HUB DRAIN.
2. WALLBOX FOR REFRIGERATOR ICE MAKER CONNECTION, PROVIDE WITH SHUTOFF VALVE AND SHOCK ARRESTOR. PROVIDE FIRE RATED ICE MAKER BOX WHERE LOCATED WITHIN FIRE RATED WALL, COORDINATE WITH ARCH. MAKE CONNECTION TO REFRIGERATOR PER MANUFACTURER'S INSTRUCTIONS.
3. NO PIPING SHALL BE ROUTED OVER ELECTRICAL PANEL, COORDINATE EXACT PIPE ROUTING IN FIELD TO AVOID ROUTING PIPING OVER PANEL.
4. USE PEX PIPING FOR CW/HW DISTRIBUTION IN APARTMENT. COORDINATE EXACT LOCATION OF PEX MANIFOLD INSIDE THE APARTMENT IN FIELD.
5. STACKED WASHER/DRYER TO HAVE TWO BOX SETUP WITH SEPARATE WALL BOX FOR SUPPLIES AND DRAIN. PROVIDE WATER HAMMER ARRESTORS ON SUPPLY VALVES, LOCATE DRAIN BOX IN ADJACENT WALL FROM SUPPLY BOX, FIELD COORDINATE EXACT LOCATION AND WASHER BOX REQUIREMENTS WITH GENERAL CONTRACTOR. COORDINATE WASHER BOX LOCATIONS WITH DRYER DUCT VENT (IN WALL STYLE). RE: DIAGRAM FOR ADDITIONAL INFORMATION.

GENERAL NOTES

A. IN THE CASE OF A DISCREPANCY BETWEEN GENERAL NOTES, DETAIL NOTES, SPECIFICATION, OR GRAPHICAL DEPICTIONS, IT IS THE CONTRACTOR'S RESPONSIBILITY TO CLARIFY DESIGN INTENT WITH ENGINEER.

B. REFER TO SCHEDULES, DIAGRAMS AND ISOMETRIC DIAGRAMS FOR ALL PIPE SIZES NOT SHOWN ON PLAN.

C. FIELD COORDINATE ALL EQUIPMENT LOCATIONS AND PIPE ROUTINGS WITH ALL STRUCTURAL, HVAC, LIGHTS AND ALL OTHER DISCIPLINES PRIOR TO BEGINNING WORK.

D. CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ANY AND ALL CUTTING AND PATCHING AS REQUIRED TO ACCOMMODATE THEIR WORK, COORDINATE LOCATIONS WITH GENERAL CONTRACTOR.

E. PLUMBING CONTRACTOR TO COORDINATE ROUGH-IN DIMENSIONS AND ELEVATIONS WITH ARCHITECTURAL DRAWINGS.

F. WATER, SEWER, GAS AND ELECTRICAL CONDUITS MUST FIT WITHIN WALLS. CONFLICTS WITH OTHER TRADES MUST BE COORDINATED OR WORK WILL BE REDONE.

G. COORDINATE ALL ACCESS PANEL LOCATIONS FOR VALVES, SHOCK ARRESTORS, AIR ADMITTANCE VALVES AND ALL OTHER PLUMBING COMPONENTS INVOLVING ACCESS WITH ARCHITECT.

H. NOT ALL ISOLATION VALVES SHOWN ON PLANS. PROVIDE ISOLATION VALVES ON ALL DOMESTIC WATER BRANCH PIPING. COORDINATE ANY AND ALL ACCESS PANELS WITH ARCHITECT.

I. EQUIPMENT GAS CONNECTION SIZE PER PLANS OR SAME AS APPLIANCE SIZE, WHICHEVER IS LARGER. TRANSITION DOWNSTREAM OF ALL SHUTOFFS AND REGULATORS AS CLOSE TO APPLIANCE AS POSSIBLE WHEN PLANS CALL FOR LARGER THAN APPLIANCE.

J. EXPOSED SEWER PIPING (TRAPS & INDIRECT DRAINS) MUST BE COPPER. RE: PROJECT SPECS.

DETAIL NOTES THIS SHEET

1. EXTEND AND CONNECT NEW SANITARY WASTE TO CIVIL POINT OF CONNECTION (POC) IN AREA SHOWN. PROVIDE 2-WAY CLEANOUT AT SANITARY WASTE/SEWER JUNCTION AT EXTERIOR OF BUILDING. FIELD VERIFY EXACT LOCATION AND INVERT ELEVATION AT POINT OF CONNECTION.

2. EXTEND AND CONNECT NEW DOMESTIC COLD WATER PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. BASIS OF DESIGN IS INTERIOR METER WITH 1-1/2" TAP/METER ASSEMBLY WITH INCREASE IN SERVICE SIZE TO 2" AT A POINT 50' DOWNSTREAM OF METER TO BUILDING RPZ, AND UPSIZED TO 3" PIPE DOWNSTREAM OF RPZ. SEE DETAIL ON P0501.

3. EXTEND AND CONNECT NEW FIRE PROTECTION PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. COORDINATE FIRE RISER ROOM LOCATION WITH G.C. COORDINATE FDC LOCATION WITH AHJ. SPRINKLER DESIGN TO BE PERFORMED BY NFPA CERTIFIED DESIGNER, SHOP DRAWINGS BY DEFERRED SUBMITTAL.

4. EXTEND AND CONNECT NEW STORM DRAINAGE TO CIVIL POINT OF CONNECTION (POC) IN AREA SHOWN. FIELD VERIFY EXACT LOCATION AND INVERT ELEVATION AT POINT OF CONNECTION.

5. STRUCTURAL FOUNDATION WALL PENETRATION AT LOCATION SHOWN, INVERT ELEVATION NOTED. RE: STRUCTURAL PLANS FOR DETAILS.

6. PIPE ROUTED BELOW STRUCTURAL FOOTER, MAINTAIN MINIMUM 6" CLEAR BETWEEN UNDERSIDE OF FOOTER AND TOP OF PIPE. RE: STRUCTURAL PLANS FOR DETAILS.

THIRD LEVEL PIPNG PLAN

3/16" = 1'-0"

DETAIL NOTES THIS SHEET

1. NO PIPING SHALL BE ROUTED OVER ELECTRICAL ROOM, COORDINATE ALL PIPING ROUTING IN THIS AREA TO AVOID ELECTRICAL ROOM.
2. HOT&COLD WATER PIPING TO SERVE INDIVIDUAL UNITS. SEE UNIT PLUMBING PLANS FOR CONTINUATION. TYPICAL.
3. HOT, COLD & HOT WATER RECIRCULATION RISERS - SEE WATER RISER DETAIL ON SHEET P0901.
4. GAS PIPING UP TO SERVE ROOFTOP UNITS. SEE MECHANICAL ROOF PLAN ON SHEET M0206 FOR CONTINUATION.
5. PROVIDE SELF-ACTING THERMOSTATIC RECIRCULATION VALVE, CIRCUITSOLVER CS-3/4-115 IN ACCESSIBLE LOCATION.

P0215

3/13/2026 8:50:33 AM

DETAIL NOTES THIS SHEET

1. EXTEND AND CONNECT NEW DOMESTIC COLD WATER PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. BASIS OF DESIGN IS EXTERIOR METER PIT WITH 2" TAP/METER ASSEMBLY WITH INCREASE IN SERVICE SIZE TO 3" AT A POINT 50' DOWNSTREAM OF METER FULL LENGTH TO BUILDING WATER ENTRY.
2. EXTEND AND CONNECT NEW FIRE PROTECTION PIPING TO CIVIL POC. FIELD VERIFY EXACT LOCATION AND CONNECTION. COORDINATE FIRE RISER ROOM LOCATION WITH G.C. COORDINATE FDC LOCATION WITH AHJ. SPRINKLER DESIGN TO BE PERFORMED BY NFPA CERTIFIED DESIGNER, SHOP DRAWINGS BY DEFERRED SUBMITTAL.
3. ROUTE DRAIN FROM RPZ TO FLOOR SINK IN WATER ENTRY, DRAIN SIZE EQUAL TO RPZ SIZE.
4. ROUTE INDIRECT WASTE FROM EQUIPMENT TO SINK TAILPIECE.
5. ROUTE INDIRECT WASTE FROM EQUIPMENT TO FLOOR DRAIN/SINK.
6. FLUE & COMBUSTION AIR FROM WATER HEATERS OUT THROUGH EXTERIOR WALL. PIPING TO BE SCHEDULE 40 PVC OR CPVC, ROUTED AND TERMINATED PER MANUFACTURER'S REQUIREMENTS.
7. SEE CENTRAL HOT WATER PIPING DIAGRAM ON SHEET P0901 FOR DETAILS IN THIS AREA.
8. PROVIDE ASSE 1016, MIXING VALVE (WATTS USG-B) AND CHECK VALVE ON EACH WATER LINE. ADJUST VALVE TO PROVIDE 110°F WATER FOR HAND SINK. LOCATE IN ACCESSIBLE LOCATION BELOW SINK. SEE POINT OF USE DETAIL ON SHEET P0801.
9. NO PIPING SHALL BE ROUTED OVER ELECTRICAL PANEL, COORDINATE EXACT PIPE ROUTING IN FIELD TO AVOID ROUTING PIPING OVER PANEL.
10. PROVIDE SELF-ACTING THERMOSTATIC RECIRCULATION VALVE, CIRCUITSOLVER CS-1/2-115 IN ACCESSIBLE LOCATION.

DIVISION 21 - FIRE SUPPRESSION

SECTION 21 00 00 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

1.01 WORK INCLUDED

A. The work included by this division of the specifications includes furnishing all labor, materials, equipment, and services, including minor items omitted but necessary to construct and install the complete systems described by the Contract Documents and specified below. "Contractor" refers to the Fire Sprinkler Contractor. The general conditions of the specifications apply and are included in this part of this section.

1. Fire sprinkler systems

1.02 SEE SECTION 22 05 00 FOR BASIC MATERIALS AND METHODS

SECTION 21 13 00 - FIRE SUPPRESSION SPRINKLER SYSTEM

2.01 WORK INCLUDED

A. Provide complete automatic fire protection systems, including but not limited to inside piping, sprinkler heads, valves, hangers and supports, sleeves, fire department connections and accessories, fire hose cabinets, valves. Entire installation shall be as required by the local authorities. Consult with local authorities to determine all local requirements before submitting a bid.

1. The sprinkler system(s) shall be as follows: Wet system throughout.

B. Secure and pay for all necessary permits and certificates of inspection, and present to Owner with the signed certificates of final inspection.

C. Coordinate this work with all other trades so as to have a minimum of interference. INSTALLATION SHALL NOT BEGIN UNTIL DUCTWORK IS INSTALLED OR WRITTEN AUTHORIZATION IS MADE BY THE OWNER.

D. Accomplish all necessary cutting and patching for installation of piping and equipment, and provide all cutting as directed by Architect. Where necessary to cut chases in walls, reinforce walls as directed. After work is installed, patch holes to match original finish.

E. The system design including pipe sizing and location, configuration of branches and head connections, shall accommodate the installation of up/down heads in all areas which may or may not have a dropped ceiling.

F. RELATED WORK: Basic materials and methods: Section 22 05 00.

2.02 QUALITY ASSURANCE

A. Sprinkler equipment and installation to be approved by local fire authority.

B. Provide a complete automatic fire protection system as required. System shall be complete in all respects and in accordance with all applicable codes, ordinances, International Building Code, and NFPA Volume 2, Section 13 and NFPA Volume 2, Section 14.

C. The system shall be installed by a firm regularly engaged in the design and installation of automatic sprinkler systems in accordance with the requirements of the National Board of Fire Underwriters. Architect may require evidence to support the above qualifications and may reject any proposed installer who cannot show suitable experience.

D. All materials and equipment used in the installation of the sprinkler system shall be as approved in the Underwriters' Laboratories' list of inspected fire protection equipment and materials, or the Factory Mutual Laboratories' list of approved equipment and fire protection devices involving fire hazard, and shall be the latest product of the manufacturer.

2.03 SUBMITTALS

A. Submit shop drawings showing proposed layout of Fire Protection System, showing actual equipment to be used, complete with such dimensions as are required to accurately install the system, drawn to a minimum scale of 1/8" equals 1'0". Drawings shall be approved by Underwriters and local authority before submission to Architect and Engineer (four copies).

B. Shop drawings shall show all proposed routing of piping. Piping shall be installed to clear all other items of equipment and Architectural and Structural components within the building. Show all details required to make a complete installation from the shop drawings. After approval of drawings has been obtained, install the system exactly as shown. Obtain approval from Architect/Engineer to make any changes from shop drawings.

C. Shop drawings shall clearly show any piping that will not be concealed in the building structure

3.01 ACCEPTABLE MANUFACTURER'S

A. Equipment shall be by Grinnell, Viking, Star, Reliable, Globe, Crocker-Standards, Central, Potter-Roemer, or approved substitute.

3.02 INTERIOR FIRE SERVICE PLUMBING

A. Pipe shall be schedule 40, black seamless steel, ASTM A120, ASTM 53. Pipe 2" or larger may be schedule 10, grooved black steel pipe. Fittings may be style 74 or 75 "Victaulic" mechanical coupling system for 300 PSI working pressure.

B. Fittings and joints shall be as follows:

1. 2" and larger : Welded with standard weight fittings or "Victaulic" fittings.
2. 1-1/2" and smaller : Screwed with 150 lb. malleable iron fittings.

3.03 FIRE DEPARTMENT SIAMESE CONNECTION

A. Provide a cast brass flush wall mounted fire department connection, adequately sized for the application with threads, fittings, etc acceptable to the local fire department. Connection shall include drop clapper, pin lug hose thread swivels, pin lug plugs and chain. The connection shall be labelled as directed by the local Fire Department. All components shall be chrome-plated.

3.04 WATER FLOW ALARMS

A. Water flow indicator shall be electric, vane-type detector with two sets of normally open contacts and a time retard to prevent false alarms.

3.05 AUTOMATIC SPRINKLERS

A. Sprinklers shall have temperature ratings as required by NFPA Standard No. 13 for the sprinkler location. Verify exact head types in finished areas with Architect. Provide specific head types as follows. The following are catalog numbers of Grinnell.

1. Finished areas (ceiling): Semi-recessed, polished chrome pendant heads. Heads shall be Model A with recessed closure.
2. Finished areas (wall):Exposed sidewall (Universal Model A).
3. Unfinished areas (ceiling): Exposed pendant or upright head, as required by the application (Universal Model A).
4. Areas exposed to freezing temperatures: Dry pendant (Model F 960).

B. Provide steel sprinkler guards on heads, which are exposed to physical damage.

3.06 TAMPER SWITCH

A. Provide an electric supervisory monitor switch at the required valves. Grinnell Model F640 or as required.

3.07 HORN/LIGHT

A. Provide an electric combination horn/light, suitable for exterior application, rated for the appropriate voltage.

3.08 PIPING INSTALLATION

A. All piping shall be concealed wherever possible. Exceptions must be clearly marked on shop drawings and shall not be installed until approved by Architect.

B. If exposed, piping shall be installed in the most direct, straight, and least obtrusive manner possible, and as close to walls and ceilings as is consistent with good workmanship.

C. Install piping graded to low points and in manner to make it possible to test and empty entire system.

D. Pipe and fittings shall be inspected for soundness and cleaned of all dirt and other foreign matter prior to being installed. All damaged pipe and fittings shall be rejected. Heads shall be covered, and system shall be ready for painting.

E. Protect open pipe ends whenever work is suspended during construction, to prevent foreign bodies entering and lodging therein. Use cast iron or malleable iron caps, or other methods as approved by the Architect

3.09 VALVE IDENTIFICATION

A. Drain valves, test valves, and control valves shall be identified with a stamped metal tag indicating their use.

3.10 TESTING

A. A 1" inspector's test connection shall be installed at the farthest and most remote location in the system with discharge running to the exterior of the building.

B. All piping and equipment shall be tested and proved tight under a hydrostatic pressure of 150% of the main pressure or 200 psig, whichever is larger. The test shall be conducted for a six-hour continuous period, with not be more than 2 pounds of pressure loss during this period in any part of the system. Any leaks found shall be repaired and the pressure test repeated.

C. All tests shall be performed in the presence of the Architect or authorized representative of the Owner.

3.11 FLUSHING

A. Flush piping system thoroughly with clear water to placing automatic sprinkler system in operation.

3.12 SPRINKLER CABINET

A. Provide a reserve sprinkler cabinet with at least six spare sprinkler heads or a minimum of two of each type used for systems with less than 300 heads total. Cabinet shall be equipped with two special sprinkler wrenches. Cabinet shall be a labeled, metal, wall-mounted type with red enamel finish and a rigid hinged and locked door. Two keys shall be provided.

DIVISION 22 - PLUMBING

SECTION 22 05 00 - COMMON WORK RESULTS FOR PLUMBING

1.01 WORK INCLUDED

A. The work included by this division of the specifications includes furnishing all labor, materials, equipment, and services, including minor items omitted but necessary to construct and install the complete systems described by the Contract Documents and specified below. "Contractor" refers to the Mechanical Contractor. The general conditions of the specifications apply and are included in this part of this section.

1. Gas piping system
2. Domestic hot and cold water systems
3. Interior sanitary sewer system
4. Interior storm sewer system and discharge

1.02 CODES AND REGULATIONS

A. Comply with state and local codes, and utility company regulations. Final interpretations will be made by the local inspection authority. The Contractor to verify the governance of the following Codes, including any local amendments and supplementary codes such as the Codes of the National Fire Protection Association:

1. Building Code: 2021 International Building Code
2. Plumbing Code: 2021 International Plumbing Code
3. Mechanical Code: 2021 International Mechanical Code
4. Fire Code: 2021 International Fire Code
5. Gas Code: 2021 International Fuel Gas Code
6. Energy Code: 2021 International Energy Conservation Code
7. Electrical Code 2023 National Electrical Code

1.03 EQUIPMENT AND MATERIALS STANDARDS

A. Equipment and materials shall be new, UL-listed for the use intended, and free from damage or defect. They shall comply with the latest industry standards.

1.04 CONTRACT DRAWINGS

A. Illustrate the general design and extent of performance required. All dimensions and locations shall be taken from the Architectural drawings. Consult with Architectural plans and locate all ceiling equipment where indicated on reflected ceiling plans

1.05 SHOP DRAWINGS

A. Submit products data and/or shop drawings as required by the Architect for the following:

1. Insulation
2. Valves
3. Plumbing fixtures and appurtenances.
4. Pumps

B. Quality of specific equipment is established by manufacturer's catalog number. Alterations caused by any Substitution shall be accomplished at no additional expense to the Owner.

C. Manufacturers not listed may submit for acceptance as an "approved equivalent." Requests for an "equivalent" means "approved equivalent". Four copies of such submittal must be received by the Engineer seven (7) working days prior to bid date.

1.06 WARRANTY

A. The Contractor shall be responsible for the successful operation of mechanical systems, equipment, and materials installed under this Contract for a period of one year from the date of final acceptance. Defective equipment or materials shall be repaired or replaced at no expense to the Owner. Provide four complete service and maintenance calls spaced at equal intervals during the warranty period.

1.07 PRODUCT HANDLING AND CLEAN UP

A. Equipment shall be left clean and undamaged, to the satisfaction of the Owner. The General Conditions take precedence.

1.08 CUTTING AND REPAIRING

A. The contractor shall be responsible for all cutting, drilling, welding, and repair required for his portion of the work. Coordinate with the Architect. The General Conditions take precedence.

1.09 OPERATING AND MAINTENANCE DATA

A. Provide the Owner with operating and maintenance instructions (four copies) required for operation of all mechanical systems. Bind the written instructions in a notebook. The General Conditions take precedence. The manuals shall include the following items:

1. Operating manual and spare parts list for each piece of equipment.
2. Preventive maintenance schedule for lubricating and checking each piece of equipment.
3. Instructions on who to call for service during the warranty period.

1.10 PERMITS

A. The contractor shall pay for all fees, taxes, secure permits, licenses, and inspections required for the project.

1.11 TEMPORARY SERVICES

A. Provide temporary water service for construction, as required by the General Contractor.

1.12 COORDINATION

A. Coordinate outlet device and equipment locations with the Architectural Plans and work of other trades. Locate on horizontal and vertical lines to avoid interference and to provide functional use of all equipment. Verify electrical power characteristics before ordering equipment.

B. Electrical work performed by this contractor will conform to the standards of Division 26-28. Mechanical equipment motors and controls shall be furnished, set in place, and wired according with the following schedule unless otherwise noted or specified. MC = Division 21-23 EC = Division 26-28

Item	Furn By	Set By	Power Wiring	Control Wiring
Combination starters	MC	EC	EC	MC
Equipment motors	MC	MC	EC	--
Motor starters & O.L. relays	MC	EC	EC	MC
Disconnect switches	EC	EC	EC	MC
Thermal overload heaters (1)	EC	EC	EC	--
Variable Speed Drives	MC	EC	EC	MC
Control relays/transformers	MC	MC	EC	MC
Temperature control panels	MC	MC	EC	MC
Temp. Controls conduit/wiring	MC	MC	--	MC
Actuator and solenoid wiring	MC	MC	--	MC
Pushbuttons & pilot lights	MC	MC	--	MC
Room thermostats	MC	MC	--	MC
Thermostats: line voltage	EC	EC	EC	--

C. The general guideline for the division between control (by MC) wiring and power wiring (by EC) is that power wiring carries the current which energizes a motor, control wiring does not. Control wiring may be 120V, which would be the responsibility of the MC. Control motors are wired by the MC.

D. Examine the site and become aware of existing conditions, utilities, and other issues affecting the satisfactory completion of the project.

1.13 DELIVERY, STORAGE, HANDLING

A. Provide necessary hauling and hoisting equipment. Protect the materials of this Division before, during, and after installation.

1.14 AS-BUILT DRAWINGS

A. Keep a current set of "as-built" drawings on site. Upon completion of the work, furnish engineer with a reproducible prints showing the "as-built" installation.

1.15 PROJECT/SITE CONDITIONS

A. Visit the site to become familiar with location and the various conditions affecting the work, including existing utilities.

1.16 PLAN VERIFICATION

A. After completion of the bidding and selection process, prior to awarding the contract, the contractor must review and verify the contract documents in their entirety, including those of other trades. At this time, discrepancies, conflicts, omissions, etc in the contract documents must be documented. Alterations to the contract will be made at that time to include such items, as well other modifications which might be made by the Owner. After award of the contract, change orders caused by discrepancies, conflicts, omissions in the contract documents will not be allowed.

2.01 EXPANSION JOINTS, GUIDES, AND ANCHORS

A. Provide expansion joints or loops, guides, and anchors in piping to allow for expansion and contractions. Expansion joints shall be bellows type.

2.02 VALVES

A. Gate valves 2" and smaller shall be cast bronze, rising stem, solid disc, 200 PSI WOG

B. Ball valves 2" and smaller shall be cast bronze, full port, stainless steel ball, teflon sets, 400 PSI WOG.

C. Butterfly valves 2" and smaller shall be cast bronze, stainless steel disc, surrounding fluorelastomer seal, 350 PSI WOG.

D. Check valves shall be horizontal, swing-cast bronze, bronze disc, 200 PSI WOG.

E. Valves shall be domestically manufactured by Milwaukee, Powell, Nibco, or equivalent.

2.03 RELIEF VALVES

A. Relief valves shall be all-bronze A.S.M.E. rated valves with external test levers, sized in accordance with the instructions of the appropriate manufacturer. Pipe discharge outside or to floor drain where possible and per code. Valves shall be manufactured by Watts or equivalent.

2.04 FLEXIBLE CONNECTORS

A. Connectors in piping shall be made with molded teflon or neoprene and nylon bellows, metal reinforcing rings, flanged ends and control rods, suitable for 40F to 200F temperature range and 125 lbs. pressure. Alternative shall be stainless steel inner hose with braided exterior sleeve for steel pipe or bronze inner hose with braided exterior sleeve for copper piping. Metra-flex Company, or equivalent.

2.05 SPECIALTIES

A. P/T Plugs: 1/4" diameter, brass with Nordel core, Sisco or equivalent.

B. Pressure Gauges: 4 1/2" dial type, aluminum housing. Ashcroft 1010 or equivalent.

C. Thermometers: 7" red reading mercury type. Palmer Instruments or equivalent.

2.06 ELECTRICAL

A. Lugs: Lugs for wiring connections shall be rated for copper and aluminum, and shall have a minimum rating of 75C.

B. Electric motors shall be rated for the appropriate application: wet location (TEFC); submersible; explosion proof, VFD's, etc.

2.07 ACCESS PANELS

A. The Mechanical Contractor shall furnish and install access panels where required for access to equipment. Access panels shall be adequately sized, of a type approved by the Architect and shall be fire or smoke-rated as required.

2.08 EXCAVATION AND BACKFILLING

A. Provide excavating and backfilling for Mechanical Work. Backfill in 12" layers, mechanically tamp to 95% proctor standards. Protect according to OSHA standards. The General Conditions take precedence. Verify the location of underground utilities before excavation; the contractor is responsible for any damage to underground utilities. Restore existing paving, curbs, sod, bushes, etc to match surroundings.

2.09 START-UP PROCEDURES

A. Follow manufacturer's recommended procedures in starting up the equipment; damage caused during start-up shall be replaced at no expense to the owner.

2.10 PIPING INSTALLATION

A. Install piping plumb and straight, parallel with walls and partitions. Conceal piping within structure whenever practical. Provide drain valves at all low points, vents at all high points, to allow complete drainage.

B. Material and methods per ASME, ASTM, ASA, AWS, and National Plumbing Code Handbook

C. Provide unions or flanges in piping connections to each valve, device, or item of equipment. Install each union or flange to permit the removal of parts and equipment for inspection or cleaning, without disconnecting any piping, except unions or flanges. Provide dielectric unions at locations with dissimilar materials.

D. Piping on the roof will be supported above the roof on roof pads. The pads shall be approximately 6"Wide by 6" high by the length as required. They shall be made of recycled rubber, rated for 500lbs/ft loading each. The pads will have galvanized steel "C" channel attached to the top, which can accommodate pipe clamps to secure the piping. This configuration of individual piping pads may be expanded to include two pads supporting a trapeze style support where multiple pipes are racked together. The pads are C-series manufactured by Cooper B-line, Erico, or approved equivalent.

2.11 HANGERS AND SUPPORTS

A. Support piping and equipment from the structure to prevent sagging, pocketing, swaying, and vibrations, and arranged to provide for expansion and contraction. Brackets, clamps, and hangers shall be steel, except copper hangers will be used with copper piping. Hangers supporting vibrating equipment shall be provided with spring isolators. Chain, perforated iron or wire hangers are not permitted. Hangers will be of a type acceptable to the Engineer, and shall have a capacity and spacing as required by code.

2.12 SLEEVES AND PLATES

A. Provide sleeves and inserts for all mechanical piping. The contractor shall be responsible for the cost of cutting and patching required for piping where sleeves and inserts were not installed or where incorrectly located. Sheetrock joint compound may be used to seal openings in non-rated walls(insulation to be continuous through walls.

B. Drill holes as required for the installation of hangers required for the mechanical work.

C. Where sleeves are placed in exterior walls below grade, the space between the pipe or conduit and the sleeves shall be made completely water-tight.

D. Seal all piping passing through fire-rated construction with approved material to maintain air-tight, fire-rated integrity, with a U.L. listed assembly compatible with the wall or floor assembly being penetrated.

2.13 PIPING TESTING

A. All piping systems shall be tested and witnessed by the Owner prior to concealment. Protect equipment and fixtures or equipment, isolating them during the test. DWV system shall be sealed and hold water without leaks for 24 hours. Domestic water and hydronic piping shall be air tested at 150 PSIG; natural gas piping shall be air tested at 30 PSIG. Air tests shall be held for one hour without loss of pressure.

2.14 CLEANING AND STERILIZATION

A. After testing, water piping systems shall be filled, operated for a sufficient length of time to completely remove all foreign material, and flushed.

B. Sterilize the domestic hot and cold water piping in accordance with the local health authority standards. Flush the systems with clear water until the residual chlorine content is equal to that of clear water.

C. Where there is no water treatment contractor sterilize piping system with chlorine for 24 hours to 50 PPM. Completely flush to less than 1 PPM. Local health authority standards take precedence.

2.15 FLEXIBLE PIPE CONNECTIONS

A. Provide flexible pipe connection suitable to connect to adjoining piping as specified for pipe joints. Use sized pipe units. Install flexible pipe connectors on pipes connected to equipment supported by vibration isolation.

2.16 PIPE IDENTIFICATION

A. After completion of the piping or insulation, paint stenciled descriptive abbreviations, including directional arrows, on piping at equipment and approximately every 25'.

SECTION 22 07 00 - PLUMBING INSULATION

1.01 QUALITY ASSURANCE

A. All insulation shall have a composite rating (insulation, jacket and adhesives) not exceeding flame spread 25 and smoke developed 50.

2.01 PIPE INSULATION FOR PIPING ABOVE GRADE

A. Insulation shall be closed-cell, elastomeric pipe insulation having a conductivity of 0.27 at 75 °F mean, with thicknesses as follows:

Pipe Sizes	<1"	1" to 1½"	> 1½"
Dom. cold piping	1/2"	1/2"	1"
Roof drain sumps, & horiz. leaders	1/2"	1/2"	1"
Dom. hot & recirc. Piping	1-1/2"	1-1/2"	1-1/2"

B. Insulation shall be Armacell "Armaflex" or equivalent by Johns-Mansville, Owens-Corning.

C. Buried piping insulation will be sleeved with PVC or HDPE pipe sleeve or encased in concrete. Sleeve and insulation will be sealed weathertight and installed per manufacturers instructions.

D. Exterior piping insulation will be painted with a white solvent based alkyd finish (Armaflex AB or equivalent), including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions. Where exposed to physical damage, exterior piping insulation will be covered with aluminum jacket, including all fittings, valves, etc.

E. All interior underground water (domestic and hydronic) piping shall be insulated with 1" Armaflex, except where noted.

2.02 PIPE INSULATION FOR PIPING BELOW GRADE

A. Insulation shall be closed-cell, elastomeric pipe insulation having a conductivity of 0.27 at 75F mean, with thicknesses as follows:

Pipe Sizes	<1"	1" to 1½"	> 1½"
Dom. cold piping	1/2"	1/2"	1"
Dom. hot & recirc. Piping	1"	1"	1"

B. Insulation shall be Armacell "Armaflex" or equivalent by Johns-Mansville, Owens-Corning.

C. Exterior piping insulation will be painted with a white solvent based alkyd finish (Armaflex AB or equivalent), including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions. Where exposed to physical damage, exterior piping insulation will be covered with aluminum jacket, including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions.

D. All interior underground water (domestic and hydronic) piping shall be insulated with 1" Armaflex, except where noted.

3.01 PIPE(ELASTOMERIC)

A. Insulation shall be solid slip-on installed prior to connection. Butt joints shall be sealed with manufacturer's adhesive. Where slit seams must be installed, seal the seam with manufacturer's adhesive. Fittings shall be insulated with meter-cut pieces of insulation according to manufacturer's instructions, or insulated with similar sheet insulation installed according to manufacturer's instructions.

B. Provide wood blocks and metal hanger shields at support strap locations on horizontal pipe runs. Insulation will not be interrupted for supports, etc.

SECTION 22 10 00 - PLUMBING

1.01 WATER SERVICE

A. Consult with local authorities to provide water service. Provide meter pit, meter yokes, valves, RPZ valves, PRV valves, etc. for complete installation. Connect to a point 5' from building. Coordinate exact point of connection with site contractor before bidding.

1.02 SANITARY SEWER CONNECTION

A. Consult with local authorities and connect to sewer main as required. Connect to a point 5' from building. Coordinate exact point of connection with site contractor before bidding.

2.01 DOMESTIC WATER SYSTEM PIPING

A. Domestic cold, hot, and recirculating hot water piping may be either copper, or PEX, as noted below:

1. Copper piping:
   a. Above grade, piping shall be Type L, hard-drawn copper tubing with wrought copper fittings. Solder shall be lead-free.
   b. Below grade, piping shall be Type K, soft-drawn copper tubing with fittings only where specifically allowed by the architect. Where required, the fittings will be wrought copper. Solder shall be 95/5 tin/antimony, except underground, where it will be silver solder.
2. PEX Tubing:
   a. Tubing shall be cross-linked polyethylene using the Engel method of cross-linking. The tubing shall be rated for 80PSI at 200F, and shall be manufactured according to ASTM F 876 and ASTM F 877.
   b. Fittings shall be APR(brass) "Pro-pex" style or equivalent. Manifolds may be copper, brass, or plastic, with balancing controls.
   c. Stub outs to be copper with brass shutoff valves. Stub outs to be properly secured to wall.
   d. Tubing in return air plenums, or other areas designed as air handling plenums, shall be installed to a flame rating of 25/50 according to ASTM E84, whether by spacing, insulation or other approved method.
   e. Tubing shall be as manufactured by Wirsbo or equivalent.

2.02 SOIL, WASTE, AND STORM PIPING

A. Soil, waste, and vent piping, and storm piping shall be schedule 40 solid core PVC conforming to ASTM D2665 and ASTM D1785 with solvent joints conforming to ASTMD2855, except as noted below. PVC buried below slab shall be installed in conformance with ASTM D2321:

1. Hubless(No Hub), cast iron soil pipe conforming to CISPI 301 with stainless steel no-hub couplings conforming to CISPI 310 shall be used in return air plenums and other areas designed as air handling plenums, or where specifically required by local code. All cast iron soil pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute and be listed by the NSF International.
2. Epoxy Coated Hubless(No Hub), cast iron soil pipe conforming to CISPI 301 with stainless steel no-hub couplings conforming to CISPI 310 shall be used in commercial kitchens to a point approximately 20' downstream of drains serving dishmachines.

B. Soil, waste, and storm piping below grade 5' beyond the building may be PVC SDR 35, installed in conformance with ASTM 3034 and utilizing push-on joints.

C. Storm water piping shall be same as soil and waste piping when concealed and galvanized schedule 40 steel pipe when exposed to physical damage. Fittings shall be cast iron, drainage type.

2.03 PLUMBING FIXTURES AND TRIM

A. Provide plumbing fixtures as specified on the plans. Provide carriers, trim, bolts, caps, etc according to the manufacturer's instructions and as required for a complete installation. All fittings and appurtenances (p-traps, connections, etc) shall be brass; chrome plated brass where visible.

B. Provide carriers for wall hung or mounted fixtures such as water closets, lavatories, urinals, sinks, etc. The carriers shall be designed to fit in the wall structure available, and shall transmit the load to the floor. Fixtures will not be supported by the wall structure unless specifically indicated.

2.04 GAS PIPING

A. Above grade in accessible locations, gas piping shall be schedule 40, black iron pipe with threaded fittings. Fittings shall be made of malleable iron. Gas piping run in return plenums, where allowed by local code, shall have welded joints.

B. Regulators shall be Maxitrol, or equivalent, of size and capacity as required.

2.05 GAS WATER HEATER(SEALED COMBUSTION)

A. Water heater shall be as specified on the plans. Heaters shall be approved and listed by the American Gas Association as self-contained, vented water heaters. The tank shall be heavy-gauge, welded steel, glass-lined, foam insulated to conform to ASHRAE 90.1b-1992. The heater shall be rated for 150 PSI and shall have a five-year warranty. The power burner shall be sealed combustion, submerged with spiral internal flue. The controls shall be electronic microprocessor based with digital display and shall include high-limit control and safety shut off. The heater shall include two (2) magnesium anodes and a pressure and temperature relief valve. The heater will be furnished with integral heat traps. Where required by local code, provide ASME certification.

B. Water heater shall be provided with R 14 insulation. Where factory insulation does not meet insulation requirements, provide aftermarket insulated jacket as required to meet requirements.

C. Where flue is run thru uninsulated, unconditioned spaces (attics, crawlspaces, etc.), insulate the flue with R8 equivalent insulation.

D. The water heaters shall be manufactured by A.O. Smith, State, Polaris, Ruud or Bradford-White.

2.06 CONDENSATE NEUTRALIZER

A. Neutralizer shall be inline type made from corrosion resistant material with replaceable neutralization media. Neutralizer shall be of appropriate size and type for appliance served.

B. Manufacturer shall be Dayton, Axiom, or equivalent.

2.07 DOMESTIC RECIRCULATING PUMP

A. Pump shall be 2800 rpm, in-line, centrifugal oil-lubricated, sleeve-bearing pump with flanged piping connections, bronze body, plastic impeller, and having mechanical seals. Motors shall be non-overloading, open drip-proof type.

B. The pump shall be furnished with an automatic timer kit.

C. Manufacturer shall be Bell and Gossett, Paco, Taco, or approved equivalent.

3.01 DOMESTIC WATER SYSTEM

A. Provide drip cocks so that the entire system may be drained. Provide manual air vents at high points in the system where air may be trapped. Provide stops for all fixtures and appliances. Provide a full size ball valve on each branch serving a hose bib.

B. Provide swing or swivel joints on connections as required to prevent noise or vibration of the piping. Provide fixture stops at all fixtures, hose bibbs, wall hydrants, and Owner-furnished fixtures. Run all piping on warm side of building insulation. Pipe insulation is not considered freeze protection. Provide water hammer arrestors where required. Locate to be accessible or provide access panel.

3.02 SOIL, WASTE, AND STORM WATER PIPING

A. Lay piping true to line and grade so that sewer will have smooth and uniform invert throughout its length. Verify elevations of existing sewer before starting work.

B. Install a clean-out at the base of each soil stack, at the base of each interior rain-water conductor, at each change in direction, at intervals not over 50 feet interior of building, and every 100 feet exterior to building and elsewhere as shown on the drawings or required by Code. Make clean-outs same size as pipe service, except they need be no larger than 4". Set tops and covers flush with floors and walls. Wall covers shall be round polished stainless steel with centered stainless steel securing screw (Josam 58710). Floor cleanouts shall be flush, cast iron, ABS plug with Nikalloy cover(Josam 56000). Provide floor clamps at each floor for uniform support of stacks.

C. The entire drain waste and vent, and storm sewer systems shall be watertight and odorproof, including sealing of floor drains and sinks, closet rings, etc.

3.03 WATER HEATER INSTALLATION

A. Install water heaters per manufacturer's instructions. Provide 24 gauge, galvanized steel drain pan, piped with minimum ¾" drain, piped to an approved receptor with indirect waste connection per code.

B. Route the P/T relief valve full sized to approved receptor and discharge per code. Provide expansion device, tank or valve, as required by code, and allowed by the local jurisdiction.

C. Flue and combustion air ducts shall be provided by the mechanical contractor, unless otherwise noted. Where sealed combustion water heaters are used, the Plumbing Contractor shall install PVC flue and combustion air piping. This piping will be of the size and type recommended by the manufacturer, and use factory recommended discharge/intake fittings as shown on the plans.

D. Condensing water heaters shall utilize an inline condensate neutralizer. Provide PVC drain from water heater and/or flue with a minimum ½" drain, piped to an approved receptor with indirect waste connection per code. Verify installation details with manufacturer.

3.04 PLUMBING FIXTURES AND TRIM

A. Furnish and install a vacuum breaker at each hot and cold water service outlet to which a hose can be attached, including janitor's faucets.

B. Provide chrome-plated rigid or flexible supplies to fixtures with stops, reducers, and escutcheons. Insulate stops and supplies at handicapped sinks with Truebro lav guard or equivalent. Bag type covers are not allowed.

C. Provide chrome plated brass P-traps with slip fittings for all exposed drains. Insulate P-traps at handicapped sinks with Truebro lav guard or equivalent. Bag type covers are not allowed.

D. Flush valve handles, and flush tank handles, on handicapped water closets shall be located on the wide side of the stall for convenient access and as required by code.

E. Provide a flexible elastomeric sheet for flashing around all shower drains, roof drains, floor drains, floor sinks, etc except for slabs on grade. The membrane shall be a minimum 0.40 inch thick, made of chlorinated polyethylene, installed per manufacturer's instructions. The flashing membrane for roof drains, floor drains, etc shall be a minimum of 2'x2'. The flashing membrane for shower pans, service sink pans, etc shall have "pigs ear" folds in the corners, extending the membrane up at least 3" above the drain. The membranes shall be manufactured by Chloralloy or equivalent.

F. Mount fixtures the following heights above finished floor:

1. Water closet : 14"-15" to top of bowl rim; Handicapped, 18" to top of bowl rim.
2. Urinal: 24" to top of bowl rim; Handicapped, 17" to top of bowl rim.
3. Lavatory: 31" to top of basin rim; Handicapped , 32" to top of basin rim.
4. Drinking fountain : 40" to top of basin rim; Handicapped , 36" to spout.
5. Water closet flush valves : Standard, 11" minimum above bowl rim. Locate flush valves on "wide" side of handicapped toilets.
6. Floor drains : In finished areas, ¼" - ½" below finished floor. In mechanical rooms and other unfinished areas, install at least 1" below floor, except where it would be a stumble hazard.

G. Rough-in fixture piping connections in accordance with the following table of minimum sizes or as required for particular fixtures.

	HW	CW	Waste	Vent
Lavatories	1/2"	1/2"	1-1/2"	1-1/4"
Service sink	1/2"	1/2"	2"	1-1/2"
Drinking fountain	--	1/2"	1-1/4"	1-1/4"
Water closet (Valve)	--	1"	3"	2"
Water Closet (tank)	--	1/2"	3"	2"
Urinals	--	3/4"	2"	1-1/2"
Floor drains	--	--	2"	1-1/2"
Hose bibs	--	3/4"	--	--
Wash Mach Unit	1/2"	1/2"	2"	1-1/2"
Kitchen equipment	SEE SCHEDULE & PLANS			
Medical equipment	SEE SCHEDULE & PLANS			
Owner furnished equipment	SEE SCHEDULE & PLANS			

3.05 GAS PIPING

A. Gas distribution system is based on a 7" W.C. natural gas pressure except where noted on plans. Provide all gas-fired equipment with gas pressure regulators or special orifices as required to operate at 5000 ft. elevation. Provide a gas cock and drip leg at each appliance.

B. Gas piping on roof shall be secured to uv resistant Polyethylene foam block; Erico "Pipe Pier". Provide rubberized sheet under pipe support.

C. Piping exposed outside shall be painted with an exterior type latex paint which matches the adjacent roof or wall.

D. Appliance connection piping to be per plans or same as appliance size, whichever is larger. Transition downstream of all shutoffs and regulators as close to appliance as possible when plans call for larger than appliance.

3.06 KITCHEN

A. Provide final connections to all kitchen equipment in accordance with manufacturer's instructions. Provide stops or shut-off valves for hot and cold water connection; plug cocks or quick- connect couplings for gas appliances. Indirect wastes shall be DWV copper, except at soda machines where plastic pipe shall be used.

GENERAL NOTES

A. IN THE CASE OF A DISCREPANCY BETWEEN GENERAL NOTES, DETAIL NOTES, SPECIFICATION, OR GRAPHICAL DEPICTIONS, IT IS THE CONTRACTOR'S RESPONSIBILITY TO CLARIFY DESIGN INTENT WITH ENGINEER.

B. FLEX DUCT MAY NOT BE USED IN EXPOSED LOCATIONS. WHERE CONCEALED, FLEX DUCT RUNS NO LONGER THAN 2', REFER TO SPECIFICATIONS.

C. GRILLES, REGISTERS & DIFFUSERS & EXPOSED DUCTWORK TO MATCH ADJACENT CEILING/STRUCTURE COLOR. WHERE CEILING IS LIGHT COLOR, MAINTAIN WHITE GRDS. WHERE CEILING/STRUCTURE IS METAL FINISH OR DARK, PAINT GRDS TO MATCH. REFER TO ARCH PLANS FOR FINISHES.

D. ANY UNDIMENSIONED DUCTWORK CONNECTED DIRECTLY TO AN AIR HANDLER TO BE SIZED TO MATCH DUCT CONNECTION OF EQUIPMENT.

E. MAINTAIN 10' CLEARANCE FROM MECHANICAL EQUIPMENT TO EDGE OF ROOF IF PARAPET / RAILING IS LESS THAN 42" HIGH. IF CLEARANCE IS NOT POSSIBLE COORDINATE W/ GC TO PROVIDE ARREST/RESTRAINT ANCHOR PER ANSI Z359.1.

F. MECHANICAL SYSTEM IS REQUIRED TO BE COMMISSIONED PER IECC C408.2.

DETAIL NOTES THIS SHEET

1. REFER TO MUA SUPPLY STACK SECTION ON SHEET M0801. PROVIDE FIRE/SMOKE DAMPER AT SHAFT PENETRATIONS.

2. VESTIBULE CUH-1 TO BE LIMITED TO 60°F SETPOINT TO COMPLY WITH 2021 IECC.

Additional Efficiency Package(s)

Credits: 10.0 Required 11.5 Proposed
10% heating efficiency improvement, 0.0 credit
10% cooling efficiency improvement, 1.5 credit
Efficient fossil fuel water heater, 10.0 credit

Mechanical Systems List

Quantity **System Type & Description**

1 HFC/HP-1 (Single Zone):
Split System Heat Pump
Heating Mode: Capacity = 15 kBtu/h,
Proposed Efficiency = 9.50 HSPF2, Required Efficiency = 7.50 HSPF2
Cooling Mode: Capacity = 12 kBtu/h,
Proposed Efficiency = 17.00 SEER2, Required Efficiency = 14.30 SEER2
Proposed Part Load Efficiency = 0.00 , Required Part Load Efficiency = 0.00
Fan System: HFC-1 -- Compliance (Motor nameplate HP and fan efficiency method) : Passes

Fans:
FAN 1 Supply, Constant Volume, 425 CFM, 0.2 motor nameplate hp, 0.00 fan energy index , fan exception: Single fan < 1 HP or < 0.89 kW

1 HFC/HP-3 (Single Zone):
Split System Heat Pump
Heating Mode: Capacity = 40 kBtu/h,
Proposed Efficiency = 9.30 HSPF2, Required Efficiency = 7.50 HSPF2
Cooling Mode: Capacity = 36 kBtu/h,
Proposed Efficiency = 21.70 SEER2, Required Efficiency = 14.30 SEER2
Proposed Part Load Efficiency = 0.00 , Required Part Load Efficiency = 0.00
Fan System: HFC-3 -- Compliance (Motor nameplate HP and fan efficiency method) : Passes

Fans:
FAN 2 Supply, Constant Volume, 1200 CFM, 0.5 motor nameplate hp, 0.00 fan energy index , fan exception: Single fan < 1 HP or < 0.89 kW

2 MUA-1 (Single Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 150 kBtu/h
Proposed Efficiency = 81.00% Et, Required Efficiency: 80.00 % Et or 80% AFUE
Cooling: 1 each - DX DOAS (Dehumidification), Capacity = 63 kBtu/h, Air-Cooled Condenser, Air Economizer
Proposed Efficiency = 6.12 ISMRE, Required Efficiency = 4.00 ISMRE
Proposed Part Load Efficiency = 0.00 , Required Part Load Efficiency = 0.00
Fan System: MUA-1 -- Compliance (Motor nameplate HP and fan efficiency method) : Passes

Fans:
FAN 3 Supply, Constant Volume, 1300 CFM, 1.5 motor nameplate hp, 0.00 fan energy index , fan exception: Part of code listed equipment

Quantity **System Type & Description**

3 VWH/ST:
Gas Storage Water Heater, Capacity: 430 gallons, Input Rating: 850 kBtu/h w/ Circulation Pump
Proposed Efficiency: 96.00 % Et, Required Efficiency: 80.00 % Et

Mechanical Compliance Statement

Compliance Statement: The proposed mechanical design represented in this document is consistent with the building plans, specifications, and other calculations submitted with this permit application. The proposed mechanical systems have been designed to meet the 2021 IECC requirements in COM*check* Version COMcheckWeb and to comply with any applicable mandatory requirements listed in the Inspection Checklist.

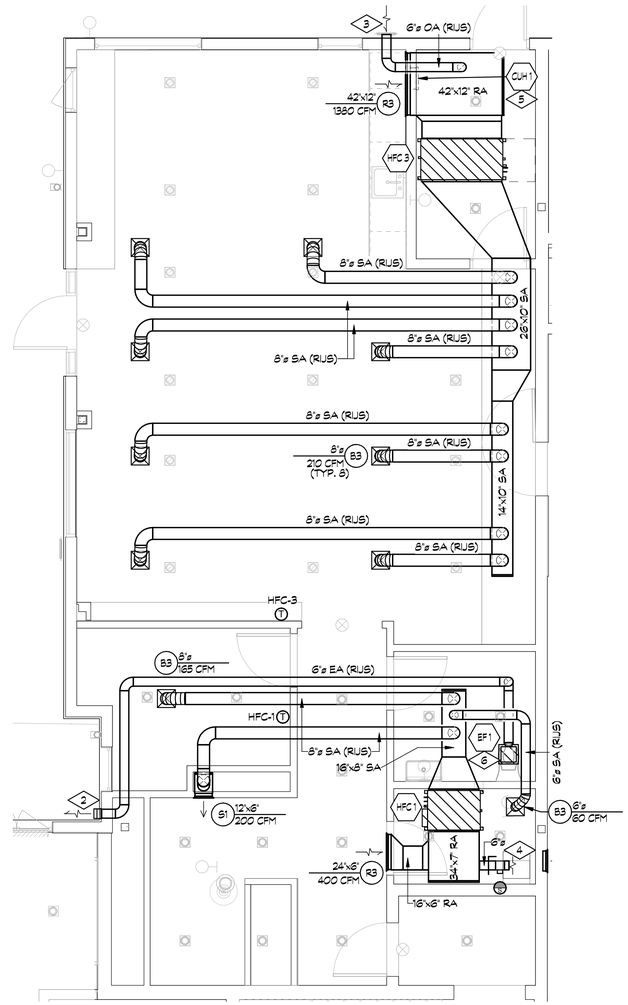
2 ENLARGED MECHANICAL ROOM HVAC PLAN
1/4" = 1'-0"



1 ENLARGED LOBBY HVAC PLAN
1/4" = 1'-0"

DETAIL NOTES THIS SHEET

1. REFER TO ARCHITECTURAL ELEVATIONS FOR LOUVER LOCATIONS.
2. TERMINATE ENVIRONMENTAL EXHAUST WITH 'XVENT' MODEL GSEB-BR WALL CAP. TERMINATION MUST BE 3'-0" MINIMUM FROM ANY BUILDING OPENINGS. SEE ARCHITECTURAL ELEVATIONS FOR TERMINATION LOCATION.
3. TERMINATE OUTSIDE AIR INTAKE WITH 'XVENT' MODEL GSEB-BR WALL CAP. BALANCE TO AIRFLOW SHOWN IN VENTILATION CALCULATION ON SHEET M0601. SEE ARCHITECTURAL ELEVATIONS FOR TERMINATION LOCATION.
4. CONNECT 6"Ø OA DUCT TO MUA SUPPLY AIR DUCT. BALANCE TO 30 CFM PER VENTILATION CALCULATION ON SHEET M0601. PROVIDE FIRE DAMPER AT SHAFT PENETRATION.
5. VESTIBULE CUH-1 TO BE LIMITED TO 60°F SETPOINT TO COMPLY WITH 2021 IECC.
6. EF-1 TO OPERATE WITH ROOM LIGHT SWITCH. REFER TO ELECTRICAL PLANS.

CHECKED BY: MV

PROJECT NO: 25135

DRAWING NO:

M0901

3/13/2026 8:51:22 AM

DIVISION 23 - HEATING, VENTILATING, AND AIR-CONDITIONING

SECTION 23 05 00 - COMMON WORK RESULTS FOR HVAC

1.01 WORK INCLUDED

A. The work included by this division of the specifications includes furnishing all labor, materials, equipment, and services, including minor items omitted but necessary to construct and install the complete systems described by the Contract Documents and specified below. "Contractor" refers to the Mechanical Contractor. The general conditions of the specifications apply and are included in this part of this section.

1. Heating, ventilating and air conditioning systems
2. Temperature control system
3. Kitchen supply and exhaust

1.02 CODES AND REGULATIONS

A. Comply with state and local codes, and utility company regulations. Final interpretations will be made by the local inspection authority. The Contractor to verify the governance of the following Codes, including any local amendments and supplementary codes such as the Codes of the National Fire Protection Association:

1. Building Code: 2021 International Building Code
2. Plumbing Code: 2021 International Plumbing Code
3. Mechanical Code: 2021 International Mechanical Code
4. Fire Code: 2021 International Fire Code
5. Gas Code: 2021 International Fuel Gas Code
6. Energy Code: 2021 International Energy Conservation Code
7. Electrical Code 2023 National Electrical Code

1.03 EQUIPMENT AND MATERIALS STANDARDS

A. Equipment and materials shall be new, UL-listed for the use intended, and free from damage or defect. They shall comply with the latest industry standards.

1.04 CONTRACT DRAWINGS

A. Illustrate the general design and extent of performance required. All dimensions and locations shall be taken from the Architectural drawings. Consult with Architectural plans and locate all ceiling equipment where indicated on reflected ceiling plans

1.05 SHOP DRAWINGS

A. Submit products data and/or shop drawings as required by the Architect for the following:

1. Insulation
2. Air handling equipment
3. Grilles, registers, diffusers, louvers
4. Fire dampers
5. Temperature controls, systems, and components

B. Quality of specific equipment is established by manufacturer's catalog number. Alterations caused by any Substitution shall be accomplished at no additional expense to the Owner.

C. Manufacturers not listed may submit for acceptance as an "approved equivalent." Requests for an "equivalent" means "approved equivalent". Four copies of such submittal must be received by the Engineer seven (7) working days prior to bid date.

1.06 WARRANTY

A. The Contractor shall be responsible for the successful operation of mechanical systems, equipment, and materials installed under this Contract for a period of one year from the date of final acceptance. Defective equipment or materials shall be repaired or replaced at no expense to the Owner. Provide four complete service and maintenance calls spaced at equal intervals during the warranty period.

1.07 PRODUCT HANDLING AND CLEAN UP

A. Equipment shall be left clean and undamaged, to the satisfaction of the Owner. The General Conditions take precedence.

B. HVAC equipment shall not be used during construction as a means to heat or cool the space, unless specific approval is given by the owner. If such equipment is used, it must be completely cleaned and repaired as necessary. Cleaning involves replacing all filters; cleaning all coils and heat exchangers; inspecting fans, plenums, and ductwork and cleaning as directed by the owner.

1.08 CUTTING AND REPAIRING

A. The contractor shall be responsible for all cutting, drilling, welding, and repair required for his portion of the work. Coordinate with the Architect. The General Conditions take precedence.

1.09 OPERATING AND MAINTENANCE DATA

A. Provide the Owner with operating and maintenance instructions (four copies) required for operation of all mechanical systems. Bind the written instructions in a notebook. The General Conditions take precedence. The manuals shall include the following items:

1. Operating manual and spare parts list for each piece of equipment.
2. Preventive maintenance schedule for lubricating and checking each piece of equipment.
3. Instructions on who to call for service during the warranty period.

1.10 PERMITS

A. The contractor shall pay for all fees, taxes, secure permits, licenses, and inspections required for the project.

1.11 TEMPORARY SERVICES

A. Provide temporary water service for construction, as required by the General Contractor.

1.12 COORDINATION

A. Coordinate outlet device and equipment locations with the Architectural Plans and work of other trades. Locate on horizontal and vertical lines to avoid interference and to provide functional use of all equipment. Verify electrical power characteristics before ordering equipment.

B. Electrical work performed by this contractor will conform to the standards of Division 26-28. Mechanical equipment motors and controls shall be furnished, set in place, and wired according with the following schedule unless otherwise noted or specified. MC = Division 21-23 EC = Division 26-28

Item	Furn By	Set By	Power Wiring	Control Wiring
Combination starters	MC	EC	EC	MC
Equipment motors	MC	MC	EC	--
Motor starters & O.L. relays	MC	EC	EC	MC
Disconnect switches	EC	EC	EC	MC
Thermal overload heaters (1)	EC	EC	EC	--
Variable Speed Drives	MC	EC	EC	MC
Control relays/transformers	MC	MC	EC	MC
Temperature control panels	MC	MC	EC	MC
Temp. Controls conduit/wiring	MC	MC	--	MC
Actuator and solenoid wiring	MC	MC	--	MC
Pushbuttons & pilot lights	MC	MC	--	MC
Room thermostats	MC	MC	--	MC
Thermostats: line voltage	EC	EC	EC	--

C. The general guideline for the division between control (by MC) wiring and power wiring (by EC) is that power wiring carries the current which energizes a motor, control wiring does not. Control wiring may be 120V, which would be the responsibility of the MC. Control motors are wired by the MC.

D. Examine the site and become aware of existing conditions, utilities, and other issues affecting the satisfactory completion of the project.

1.13 DELIVERY, STORAGE, HANDLING

A. Provide necessary hauling and hoisting equipment. Protect the materials of this Division before, during, and after installation.

1.14 AS-BUILT DRAWINGS

A. Keep a current set of "as-built" drawings on site. Upon completion of the work, furnish engineer with a reproducible prints showing the "as-built" installation.

1.15 PROJECT/SITE CONDITIONS

A. Visit the site to become familiar with location and the various conditions affecting the work, including existing utilities.

1.16 PLAN VERIFICATION

A. After completion of the bidding and selection process, prior to awarding the contract, the contractor must review and verify the contract documents in their entirety, including those of other trades. At this time, discrepancies, conflicts, omissions, etc in the contract documents must be documented. Alterations to the contract will be made at that time to include such items, as well other modifications which might be made by the Owner. After award of the contract, change orders caused by discrepancies, conflicts, omissions in the contract documents will not be allowed.

2.01 EXPANSION JOINTS, GUIDES, AND ANCHORS

A. Provide expansion joints or loops, guides, and anchors in piping to allow for expansion and contractions. Expansion joints shall be bellows type.

2.02 ELECTRICAL

A. Lugs: Lugs for wiring connections shall be rated for copper and aluminum, nad shall have a minimum rating of 75C.

B. Electric motors shall be rated for the appropriate application: wet location (TEFC); submersible; explosion proof, VFD's, etc.

2.03 ACCESS PANELS

A. The Mechanical Contractor shall furnish and General Contractor shall install access panels where required for access to equipment. The Mechanical Contractor shall include the cost of installation in his bid. Access panels shall be adequately sized, of a type approved by the Architect and shall be fire or smoke-rated as required.

3.01 START-UP PROCEDURES

A. Follow manufacturer's recommended procedures in starting up the equipment; damage caused during start-up shall be replaced at no expense to the owner.

3.02 HANGERS AND SUPPORTS

A. Support equipment from the structure to prevent sagging, pocketing, swaying, and vibrations, and arranged to provide for expansion and contraction. Brackets, clamps, and hangers shall be steel, except copper hangers will be used with copper piping. Hangers supporting vibrating equipment shall be provided with spring isolators. Chain, perforated iron or wire hangers are not permitted. Hangers will be of a type acceptable to the Engineer, and shall have a capacity and spacing as required by code.

3.03 LOW EMITTING MATERIALS

A. All sealants & adhesives required for the installation of mechanical & plumbing system within the building envelope shall meet the requirements for low emitting materials as set for in the South Coast Air Quality Management District (SCAQMD) Rule #1168 (or LEED new construction requirements), which includes but is not limited to:

1. Metal to Metal adhesive: VOC limit of 30g/L.
2. Fiberglass adhesive: VOC limit of 80g/L.
3. Multipurpose construction adhesive: VOC limit of 70 g/L.

SECTION 23 05 93-TESTING, ADJUSTING, AND BALANCING

1.01 GENERAL

A. Balancing shall be done by an independent firm specializing solely in the discipline of balancing air and water systems, and a member of NEBB . Firms desiring to furnish services for this project shall submit for written approval during bidding. All air and hydronic systems shall be balanced using applicable proportionate procedure.

A. (Air) Before adjustments are made, check the system for such items as dirty filters, duct and damper leakage, vibrations, etc. All diffusers, duct sections, etc shall be adjusted to deliver design quantities within 5%. Air quantities shall be tested simulating filters being 50% loaded. Adjust/replace sheaves and belts as required to achieve design air quantities. Replace thermal motor overloads as required.

2.02 REPORT

A. After all adjustments are made, a detail written report shall be prepared and submitted for approval. Final acceptance of the project will not be made until a satisfactory report is received and field verified. The report shall detail the test equipment and balancing procedures being used; the general status of the system being tested including equipment details; provide data sheets indicating the required and actual CFM of all outlets and inlets.

SECTION 23 07 00 - INSULATION

1.01 QUALITY ASSURANCE

A. All insulation shall have a composite rating (insulation, jacket and adhesives) not exceeding flame spread 25 and smoke developed 50.

2.01 PIPE INSULATION FOR PIPING ABOVE GRADE

A. Insulation shall be closed-cell, elastomeric pipe insulation having a conductivity of 0.27 at 75 °F mean, with thicknesses as follows:

Pipe Sizes	1/2" - 1-1/2"	>1-1/2"
Refrigeration Lines	1"	1"

B. Insulation shall be Armacell "Armaflex" or equivalent by Johns-Mansville, Owens-Corning.

C. Exterior piping insulation will be painted with a white solvent based alkyd finish(Armaflex AB or equivalent), including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions. Where exposed to physical damage, exterior piping insulation will be covered with aluminum jacket, including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions.

D. All interior underground water(domestic and hydronic) piping shall be insulated with 1" Armaflex, except where noted.

2.02 PIPE INSULATION FOR PIPING BELOW GRADE

A. Insulation shall be closed-cell, elastomeric pipe insulation having a conductivity of 0.27 at 75 °F mean, with thicknesses as follows:

Pipe Sizes	1/2" - 1-1/2"	>1-1/2"
Refrigeration Lines	1"	1"

B. Insulation shall be Armacell "Armaflex" or equivalent by Johns-Mansville, Owens-Corning.

C. Exterior piping insulation will be painted with a white solvent based alkyd finish(Armaflex AB or equivalent), including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions. Where exposed to physical damage, exterior piping insulation will be covered with aluminum jacket, including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions.

D. All interior underground water(domestic and hydronic) piping shall be insulated with 1" Armaflex, except where noted.

2.03 REFRIGERANT PIPE INSULATION

A. Insulation shall be 1" thick, closed-cell, elastomeric pipe insulation having a conductivity of 0.27 at 75 °F mean:

B. Exterior piping insulation will be painted with a white solvent based alkyd finish(Armaflex AB or equivalent), including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions. Where exposed to physical damage, exterior piping insulation will be covered with aluminum jacket, including all fittings, valves, etc. Jacket and insulation will be sealed weathertight and installed per manufacturers instructions.

C. Insulation shall be Armacell "Armaflex" or equivalent by Johns-Mansville, Owens-Corning.

2.04 DUCT INSULATION, WRAP

A. Duct wrap insulation shall be flexible fiberglass insulation, 1 pcf, with factory-applied, reinforced, aluminum foil vapor barrier. Insulation shall have a K-factor of .25 at 75 °F mean.

B. Duct wrap shall be installed as follows or as shown on the plans:

1. Supply air ducts(heated space): 1-1/2"
2. Supply air ducts(unheated space): 2"

C. Wrap shall be Johns-Manville "Microlite" or equivalent by Owens-Corning, Certaineed or Knauf.

D. At the contractor's option, the above specified duct wrap may be replaced with duct liner or equal or greater thickness.

2.05 DUCT LINER

A. Duct liner shall be 1-1/2 lb density (3.0lb for exterior ducts), constructed of glass fiber liner. The air stream surface is coated with black-coated mat surface. Liner shall have a "K" value of 0.24/inch at 75F mean.

B. Duct liner shall be installed as follows or as shown on the plans:

1. Exterior supply, return, or make up air ducts: 3"
2. Return air ducts(within 15' of fan): 1/2"
3. Outside air intakes within space: 1"
4. Treated make up air within space: (not insulated)

C. Liner shall be Johns-Manville "Linacoustic" or equivalent by Owens-Corning, Certaineed or Knauf.

2.06 EXTERIOR DUCT INSULATION, BOARD

A. Duct insulation shall be ridge polystyrene board insulation. Insulation shall have a K-factor no greater than .23 at 75 °F mean.

B. Duct board shall be installed as follows or as shown on the plans:

1. Supply, return, or make up air ducts ducts(exterior): 2" 3"

C. Cover insulation board with metal jacket, secure with screws or bands. Seal jacket weather tight with silicone caulk.

D. Or at the contractors discretion: cover insulation with a self-adhering weather proof membrane. Polyguard or equiv. Install per manufacturer's recommendations.

3.01 PIPE(ELASTOMERIC)

A. Insulation shall be solid slip-on installed prior to connection. Butt joints shall be sealed with manufacturer's adhesive. Where slit seams must be installed, seal the seam with manufacturer's adhesive. Fittings shall be insulated with meter-cut pieces of insulation according to manufacturer's instructions, or insulated with similar sheet insulation installed according to manufacturer's instructions.

B. Provide wood blocks and metal hanger shields at support strap locations on horizontal pipe runs. Insulation will not be interrupted for supports, etc.

3.02 DUCT WRAP

A. Wrap the fiberglass blanket around the ductwork with 2" overlapping flanges stapled at 6" on center. Strip the lap of insulation and staple the facing directly to the overlapped foil. Secure the insulation to the ductwork with 18-gauge galvanized wire at 12" on center. On ducts larger than 48", use mechanical fasteners on the bottom of the duct.

B. Tape all joints with 3" wide foil reinforced kraft tape. Tape all pin penetrations or punctures in the facing.

3.03 ACOUSTIC DUCT LINER

A. Liner shall be secured to all duct surfaces by pressing into wet adhesive, applied to 100% of the duct surface. In addition, liner shall be held in place with insulpins welded to duct and with clips slipped over the pins. Insulpins shall be located per SMACNA Standards. Liner shall be lapped and compressed in all four corners of the duct. Both upstream and downstream transverse edges shall be coated with adhesive, coated a minimum of 1" over the edge in all places.

SECTION 23 09 00 - AUTOMATIC TEMPERATURE CONTROLS

1.01 SCOPE

A. Furnish, install, and place in operation a complete system of automatic temperature controls. The temperature control contractor may be the mechanical contractor or approved sub-contractor.

B. Acceptable automatic temperature control equipment manufacturer's shall be Honeywell, Johnson Controls, or controls furnished by the specific equipment manufacturer.

C. The control system shall include all components and appurtenances necessary to provide a complete system. All wiring for automatic temperature controls, regardless of voltage shall be the responsibility of the ATC Contractor. 120VAC work shall be installed in conformance with requirements of Division 16. The Temperature Control Contractor shall coordinate all electrical work associated with his installation with the Electrical Contractor. Power wiring for all equipment, shall be the responsibility of the Electrical Contractor.

1.02 QUALITY ASSURANCE

A. Upon completion of the work, instruct the building operating personnel and provide two (2) complete sets of operating and maintenance instruction booklets.

B. Submit copies of complete temperature control diagrams with written "sequence of control" and factory-printed specification data sheets covering each control device proposed to be used, prior to installation of any equipment or part or system.

1.03 SERVICE AND GUARANTEE

A. The Contractor shall guarantee the control system installed under this section of the specification to be free from defects in workmanship and material under normal use, and agrees to provide service for one (1) year after acceptance by the Engineer or of beneficial occupancy of the building. Any defects in workmanship or material during this time shall be corrected at no charge to the Owner.

2.01 THERMOSTATS

A. HVAC unit thermostats shall be low-voltage, seven day programmable, heating/cooling type with fan on-auto switch, Wifi capable, 10 hour program retention, 5-degree deadband, automatic optimized start / start control w/ 2-degree adjustment, manual override with automatic 2 hour reset. Units shall be Honeywell TH8000 or equivalent.

3.01 SEQUENCE OF OPERATION

A. HVAC units shall each be controlled by a heating/cooling thermostat.

1. Occupied Mode - Fan (On), Heating (68F), Cooling (75F)
2. Unoccupied Mode - Fan (Auto), Heating (55F), Cooling (85F).
3. Unoccupied setpoint to reset every 2 hours during unoccupied schedule to comply with IECC C403.4.2.2 or via occupancy sensor.
4. Verify unoccupied and occupied schedule and set points with user.

B. Heat Pump Electric Heat Lockout - disable electric resistance backup heat when outdoor air temperature is greater than 32F.

C. Toilet exhaust fans shall be controlled with associated lights.

D. Activation of a duct detector shall shut down its respective HVAC unit.

SECTION 23 30 00 - HVAC AIR DISTRIBUTION SYSTEMS

1.01 DUCTWORK

A. General All ductwork shall be constructed strictly according to the latest ASHRAE, SMACNA, and IMC standards. Duct sizes shown are inside clear dimensions; maintain sizes inside lining for lined ducts.

B. Sheet Metal:

1. Sheet metal shall be constructed of coated galvanized steel of lock-forming grade conforming to ASTM Standards A-653/A653M and A-924. Reinforcement shall be constructed of galvanized steel.
2. Duct thickness shall conform to the above standards. Where there is a discrepancy, the greater thickness shall apply. Reinforcement, joint type, spacing and thicknesses may be varied at the contractors discretion, in conformance with the above standards, except where specifically noted. Transfer ducts across rated corridors shall be 26 gauge, or as required by Code.
3. Round ductwork exposed to the public will be galvanized steel, spiral wound, maintaining in a clean, shiny appearance, and not utilizing visible sealing material. Concealed round ductwork may spiral wound, or snap lock type galvanized steel ductwork.
4. Sealing: All longitudinal and transverse joints in ductwork shall be sealed with Mon-Eco Industries Eco Duct Seal 44-50 or equivalent as follows:
   a. Main supply ductwork shall be sealed to SMACNA Class B Standards(3"W.G. or less).
   b. Return, exhaust, and supply ductwork shall be sealed to SMACNA Class B Standards(3"W.G. or less).
   c. Return, exhaust, and supply ductwork downstream of coils and VAV boxes shall be sealed to SMACNA Class C. (2"W.G. or less).
5. Location: Sheet metal may be used throughout the project.

C. Flexible Ductwork (Polymer Liner):

1. Flexible ductwork shall be constructed of a spring steel helix supporting a plastic core. It shall be insulated with 1" fiberglass having a density of 1 lb./cu.ft. The insulation is sheathed in an copolymer vapor barrier jacket.
2. The duct shall be rated at 10" w.g., and a maximum velocity of 4000 fpm. The duct shall be listed in conformance with UL Standard 181, Class 1.
3. Flexible duct shall be limited to a maximum length of 2', as a means of connecting boxes, diffusers, etc. to the duct system. Uninsulated flexduct may be used where the adjacent ductwork is uninsulated or unlined.
4. Flexduct shall be manufactured by Hart & Cooley, Clevaflex or equivalent.

1.02 DUCT ACCESS DOORS

A. Where motorized dampers, fire dampers, control equipment, etc. are installed in ducts, and for cleaning ductwork, access doors shall be provided in the ducts, made air-tight with gasketed edges. Use Ventlok, or equal, sponge rubber or felt gasketing material. The doors shall be double-wall construction with 1" of rigid insulation fill and shall be attached to the duct with cam latches. Omit access door insulation and double-wall construction if ducts are not specified to be insulated. Access doors shall be constructed of the same materials as the ductwork.

B. Provide access panels where required for access to the "Duct Access Doors." If these access panels are placed in fire-rated walls or ceiling or floor, then the access panel shall have the same rating.

1.03 FLEXIBLE CONNECTIONS

A. All supply and exhaust fans and other air handling units with inlet and outlet duct or casing connections shall have a flexible connector in each connection. Connector shall be made of at least one layer of Ventglas, two-side, neoprene-coated, heavy glass fabric, Underwriters' approved and labeled as manufactured by Ventfabrics, Inc.

2.01 GRILLES, REGISTERS, AND DIFFUSERS

A. Provide grilles, registers, and diffusers of the size and type shown on the plans. Grilles, registers, and diffusers shall be made of steel with a baked white enamel finish, or extruded aluminum with clear finish, as indicated for each grille, register, or diffuser. Secure GRD's to structure where connected by flex ductwork, or where required by local code. Paint ductwork visible behind GRD's flat black. G R D's shall be manufactured by Titus, Price, Metallaire, or equivalent.

2.02 CEILING RADIATION DAMPERS

A. Provide approved ceiling radiation dampers in ducts wherever they pass into fire-rated walls, floors, and ceiling enclosures and in any other locations required by code. All ceiling radiation dampers shall be U.L. approved and labeled for 1 hour rating unless otherwise indicated on drawings. Dampers shall be fabricated of galvanized steel and shall be of such design and length as to function as a wall-mounting sleeve, which shall be part of the fire damper. Frames shall be secured, bolted construction. Damper shall be dynamic rated and tested per UL555C. Dampers shall be Metal-Fab, Ruskin, United Sheet Metal, National Controlled Air, Louvers and Dampers, Inc., or approved equivalent. Dampers shall be Type B unless otherwise indicated.

2.03 FIRE DAMPERS

A. Provide approved fire dampers in ducts wherever they pass through fire-rated walls, floors, and shaft enclosures and in any other locations required by code. All fire dampers shall be U.L. approved and labeled for 1-1/2 hour rating unless otherwise indicated on drawings. Dampers shall be fabricated of galvanized steel and shall be of such design and length as to function as a wall-mounting sleeve, which shall be part of the fire damper. Frames shall be secured, bolted construction. Damper sleeves shall be secured in wall with 2" x 1" x No. 14-gauge retaining-angle irons on the top, both sides and bottom of wall sleeve, and on each side of the fire wall. Dampers shall be Ruskin, United Sheet Metal, National Controlled Air, Louvers and Dampers, Inc., or approved equivalent. Dampers shall be Type B unless otherwise indicated.

2.04 COMBINATION SMOKE/FIRE DAMPERS

A. Each combination smoke/fire damper shall be 1-1/2 hour rated under U.L. Std 555, and a leakage rated smoke damper under U.L. Std.555S. U.L. linkage rating shall apply to all damper sizes; elevated temperature ratings shall apply to operators as well as dampers.

B. The damper shall have a fusible link and electric operator. damper and operator shall be supplied as a single entity.

C. Dampers shall be controlled by an adjacent duct or area detector, as appropriate to the situation. Installation shall include mounting of damper and detector, interconnecting wiring, etc. If there is a central building fire alarm system, the detector and interlock wiring will be provided by the electrical contractor. It is the responsibility of the mechanical contractor to assure that the damper operator is compatible with the fire alarm system; any modifications, transformers, relays, etc caused by incompatibility, will be the responsibility of the mechanical contractor.

D. Damper shall be a class II leakage rated damper, maximum 6"WC and 4,000 FPM, at 250F temperature: Ruskin FSD60 or equivalent

E. Damper shall be a class III leakage rated damper, maximum 2.5"WC and 1,500 FPM, at 250F temperature: Ruskin FSD35 or equivalent.

F. Dampers shall be manufactured by Prefco, Ruskin, National Controlled Air or equivalent.

G. Dampers shall be approved and listed by the State of California Fire Marshal. Provide State Fire Marshal with approval numbers before installation

2.05 DUCT DETECTORS

A. Duct smoke detectors shall be solid state photo-electric type. Detector shall include air sampling chamber with sampling tubes extending through the width of the air duct. LED Alarm status indicating lights shall be visible on the front of the detector. Key controller test and reset switches plus an easily accessible test jack shall be provided. They shall include alarm relay contacts (DPDT) capable of handling loads of up to five (5) amperes at 210 VAC or 28 VDC resistive. Unit shall have self-contained power supply requiring 120/220/240V power. Detector shall include a remote indicating light/test switch (this may be deleted if the unit is clearly visible and readily accessible). Provide necessary interlocks with air handlers, smoke dampers, etc as required by the local fire department, including relays, transformers, etc. Detectors Shall be listed by Underwriters' Laboratories for use in air conditioning and ventilating duct systems in compliance with the National Fire Protection Association and Underwriters' Laboratories, Standard UL 167.

2.06 EXHAUST FAN, CEILING

A. The ceiling exhaust fan shall have a steel housing with a galvanized or baked enamel finish. An automatic back-draft damper shall be located within the duct connector and have cushioned stops. The fan wheels shall be balanced centrifugal and shall operate at less than 1200 rpm. Fans shall bear the AMCA certified rating seal and the U.L. label. The entire fan, motor, and wheel assembly shall be removable without disturbing the housing. Fan motors shall be grounded and mounted on vibration isolators. Fans shall be Penn Zephyr, Greenheck, Cook Gemini, or approved equivalent.

2.07 EXHAUST FAN, ROOF (UPBLAST)

A. The roof-mounted exhaust fans shall have a spun aluminum housing with up-discharge outlet. The fan wheels shall be dynamically balanced, aluminum, centrifugal BI. The motor shall be belt-drive, open drip-proof type, mounted internally on vibration isolators. Fans shall bear the AMCA certified ratings seal and the U.L. labels for rating under L.L. Std. 762. Fans shall be controlled as scheduled in Section 23 09 00 Controls. Provide grease trough where shown. Fans shall be Greenheck, Penn, Cook, Acme, Ilg, Carnes, or approved equivalent.

2.08 EXHAUST FAN, UTILITY SET

A. Fan shall be centrifugal, belt-driven, SWSI with non-overloading backward-inclined air foil, aluminum wheel. The housing shall be continuously-welded steel with drain connection. Configure for vertical discharge. Bearings shall be permanently lubricated, sealed ball bearing pillow blocks. Motor and sheaves will be protected in a weatherproof enclosure. Construction shall be non-sparking, listed for use with a Class I kitchen hood. Fan shall be mounted on spring vibration isolators. Assembly will be mounted on a roof curb with galvanized sheetmetal cap, with ½" lip all around. Fans shall be manufactured by Acme, Greenheck, Penn Ventilator, Supreme, or equivalent.

2.09 EXHAUST FAN, ROOF

A. The roof-mounted exhaust fans shall have a spun-aluminum housing. The fan wheels shall be dynamically balanced, aluminum, centrifugal BI. The motor shall be belt-drive, open drip-proof type, mounted internally on vibration isolators. Fans shall bear the AMCA certified ratings seal and the U.L. labels for rating under U.L. Std. 762. Fans shall be controlled as scheduled in Section 23 09 00 Controls. Fans shall be Greenheck, Penn, Cook, Acme, Ilg, Carnes, or approved equivalent.

2.10 EXHAUST FAN, INLINE

A. The inline exhaust fan shall have a steel housing with a galvanized or baked enamel finish. An automatic back-draft damper shall be located within the duct connector and have cushioned stops. The fan wheels shall be balanced centrifugal and shall operate at less than 1200 rpm. Fans shall bear the AMCA certified rating seal and the U.L. label. The entire fan, motor, and wheel assembly shall be removable without disturbing the housing. Fan motors shall be grounded and mounted on vibration isolators. Fans shall be Penn, Greenheck, Cook, or approved equivalent.

2.11 EXHAUST FAN, PROPELLER

A. Provide sidewall mounted, belt drive, axial fan where shown. Propeller shall be constructed of fabricated steel, securely attached to fan shaft, and statically and dynamically balanced. Motors shall be permanently lubricated, heavy duty type. Shaft shall be polished steel, mounted in permanently lubricated, sealed ball bearing pillow blocks, rated in excess of 100,000 hours. Drive shall be sized for 150 percent of driven horsepower. Pulleys shall be cast iron, keyed to shaft. Motor sheaves shall be adjustable. Drive frame and panel shall be galvanized or painted steel with a deep formed inlet venturi. Frames shall be bolted or welded steel construction. The fan shall bear AMCA Certified sound and performance ratings.. Provide a sleeve or collar to attach fan to wall, and flex connection to ductwork. Provide access panels or removable duct section to allow maintenance and repair of fan. Provide 1/4" birdscreen, motorized damper, and wall louver on discharge. The fans shall be manufactured by Greenheck, Penn Ventilator, Hartzell, Trane, Cook, Acme, or equivalent.

2.12 AIR INTAKE AND DISCHARGE LOUVERS

A. Exterior stationary louvers shall be anodized aluminum 4" blades on 2-7/8" centers at 30 deg with return bends. Louvers shall be weatherproof. Set in frame, secure, and caulk into opening. Provide galvanized steel 1/2", 19-gauge wire mesh behind louver. Size per the plans.

B. Approved manufacturer's shall be Louvers and Dampers, Airstream, Dowco, Ruskin, or Titus.

2.13 AIR FILTERS

A. Provide air filters where shown on the drawings. Filters shall be rigid, throw-away type, constructed of pleated fiber materials with metal mesh support maze across both faces of the media. Thickness will be 2", unless 1" is the maximum thickness allowable. Filters shall have a UL listing of Class II and an average 30%(MERV 8) efficiency rating of ASHRAE Std. 52-76. Filters shall be Farr 30-30 or approved equivalent by Air Filters, Inc., Eco-Air, Cambridge, or American Air Filter.

2.14 MAKE-UP AIR UNIT (INDIRECT FIRED)

A. Provide a roof-mounted, natural gas, natural draft, down discharge, indirect fired make-up air unit, as shown on the plans. Housing shall be aluminized steel with painted enamel, and down discharge plenum.

B. Blower shall be centrifugal type with forward curved DWDI wheel, dynamically balanced. The drive sheave shall be adjustable. Motor shall be 1800 RPM, open drip-proof type. Bearings shall be permanently lubricated.

C. Furnace(s) shall be type 409 stainless steel. Burners shall be aluminized steel. Gas train shall consist of main gas cock, pressure regulator, and solenoid valve; pilot gas cock, pressure regulator, and solenoid valve. Provide spark ignition, high limit and control transformer. Main gas valve shall be modulating type, down to 30%.

D. Unit will have a factory furnished curb.

E. Unit will have a free-standing evaporative cooling section with 12" thick "munters fill" media, pump, float, fill/drain kit, and mesh intake screen. Intake section shall have a birdscreen and extended surface 2" filter. Unit intake will be a factory provided intake cowling.

F. Unit will have DX cooling section as shown on the drawings. The DX coil shall be furnished by the same manufacturer, designed to be compatible with the make-up air unit and condensing unit. The system will utilize a thermal expansion valve.

G. Intake section shall have a birdscreen and extended surface 2" filter. Unit intake will be a factory provided intake cowling.

H. Provide a remote control module, recessed mounted. The module will contain "burner on" and "blower on" indicating lamps. It will also contain a "heat-vent-cool" mode switch. The leaving air temperature control dial shall be mounted on the control module. The room override thermostat shall be mounted as shown on the drawings.

I. Provide a fill and drain kit, complete with all valves, sensors and controls.

J. Make-up air unit shall be CAS series, manufactured by Captive Air or equivalent by Modine, Greenheck, or Reznor.

2.15 HVAC UNITS(HEATPUMP)

A. Furnish and install DX heat pump heating / cooling rooftop units with electric backup as shown on the drawings. The cabinet shall be 20 gauge galvanized with 1" thick, 1-1/2 lb. density insulation, baked acrylic enamel finish. Evaporator coil will have a condensate drain pan with PVC trap. Unit will use 2" thick throw-away filters.

B. The primary heating / cooling section shall consist of a hermetic scroll compressor(s) with five year warranty, condenser fan and motor, evaporator coil. Units with multiple compressors will have separate refrigeration circuits. The unit shall be furnished with a DOE approved/unit listed operating charge, thermal expansion valve, Hi-Low pressure control, accumulator dryer and all necessary relays and starters. Provide a float in the condensate pan, interlocked with the blower, where required by the local jurisdiction.

C. The blower shall be a belt driven, forward curved, centrifugal fan, with oversize motor and drive kit. Blower controls shall be through a time delay blower relay. Single stage heating and cooling shall be available by means of the necessary controls, valves, and relays.

D. Provide a factory furnished hail guard.

E. Provide a low ambient kit for operation down to 30F.

F. Provide lockable refrigerant caps on all access ports.

G. Provide a 14" high, galvanized steel factory roof curb; mount unit perfectly level. Provide an automatic setback thermostat with fan on/auto switch as specified in Section 23 09 00.

H. The roof opening beneath the unit will be closed up and sealed tight; caulk or silicone duct penetrations.

I. Unit shall be manufactured by Lennox, Trane, Carrier, or York. Alternate manufacturer's will be accepted if heating and cooling efficiencies meet or exceed that of the specified product.

2.16 FAN COIL UNIT(HYDRONIC HEAT/DX COOLING):

A. Provide a low profile, horizontal mounted air handler consisting of a cabinet, blower, hydronic heating coil, DX coil, air filter, pump and controls as shown on the plans and specified below. The unit will be rated for use at 5,000' elevation.

B. The casing shall be designed for indoor installation, insulated with 1/2" insulation, and integral hinged access door with self-retained screws. The unit shall be completely factory assembled.

C. The fan shall consist of two forward curved DWDI centrifugal fans on a common shaft using one blower. It shall be dynamically balanced with vibration isolators. The blower shall be two speed(high cool; low-heat).

D. Refrigerant coil shall be copper with aluminum fins mechanically bonded to the tubes. The coil section is completely insulated and has a drain pan.

E. The hydronic flow control module includes pump, control, check valve, and air valve. There is also a HW freeze coil sensor.

F. The unit shall have a filter rack with 1" pleated filters. Access to filters shall be through the hinged access door.

G. The unit will be furnished with electrical disconnect and all electrical connections.

H. The air handler shall be manufactured by First Company, Aquetherm, Apollo or equivalent.

2.17 CONDENSING UNIT

A. Provide a DX cooling coil and condensing unit to be used in conjunction with the furnace(s) specified above, and as shown on the drawings. SEER shall be 15.0 or greater. The condenser shall consist of a hermetic scroll compressor(s) with five year warranty, vertical discharge direct drive condenser fan and motor, and copper condenser coil with aluminum fins.

B. The compressor shall have high-low pressure control, 5 minute anti-short circuit timer, and crankcase heat. The unit shall be furnished with an R-410A operating charge, Hi-Low pressure control, filter-dryer and all necessary relays and starters. The cabinet shall be 18 gauge galvanized with baked acrylic enamel finish. The compressor shall be pre-charged.

C. Single stage cooling shall be available by means of the necessary controls, valves, and relays. Refrigeration system shall use an expansion valve for refrigerant flow control.

D. Provide a factory furnished hail guard.

E. Provide a low ambient kit for operation down to 30F.

F. Provide lockable refrigerant caps on all access ports.

G. Unit shall be manufactured by Lennox, Trane, Carrier, or York. Alternate manufacturer's will be accepted if heating and cooling efficiencies meet or exceed that of the specified product.

2.18 CONDENSING UNITS(VARIABLE REFRIGERANT FLOW)

A. Provide DX heating and cooling condensing units to be used in conjunction with air handler(s) as shown on the drawings. The condenser shall consist of a hermetic scroll compressor(s) with five year warranty, condenser fan and motor, copper condenser coil with aluminum fins.

B. The compressor shall be inverter driven, resulting in variable frequency performance. The unit shall be furnished with an R-410 operating charge, Hi-Low pressure control, filter-dryer and all necessary relays and starters. The cabinet shall be 18 gauge galvanized with baked acrylic enamel finish.

C. The unit shall be capable of operating in heating mode with 70% capacity at -13F.

D. Provide a factory furnished 18" stand.

E. Provide a factory furnished hail guard.

F. Provide a low ambient kit for operation down to -20F.

G. Provide lockable refrigerant caps on all access ports.

H. Unit shall be manufactured by Mitsubishi, LG or Daikin.

2.19 INDOOR AIR HANDLERS(WALL, CEILING, OR DUCTED)

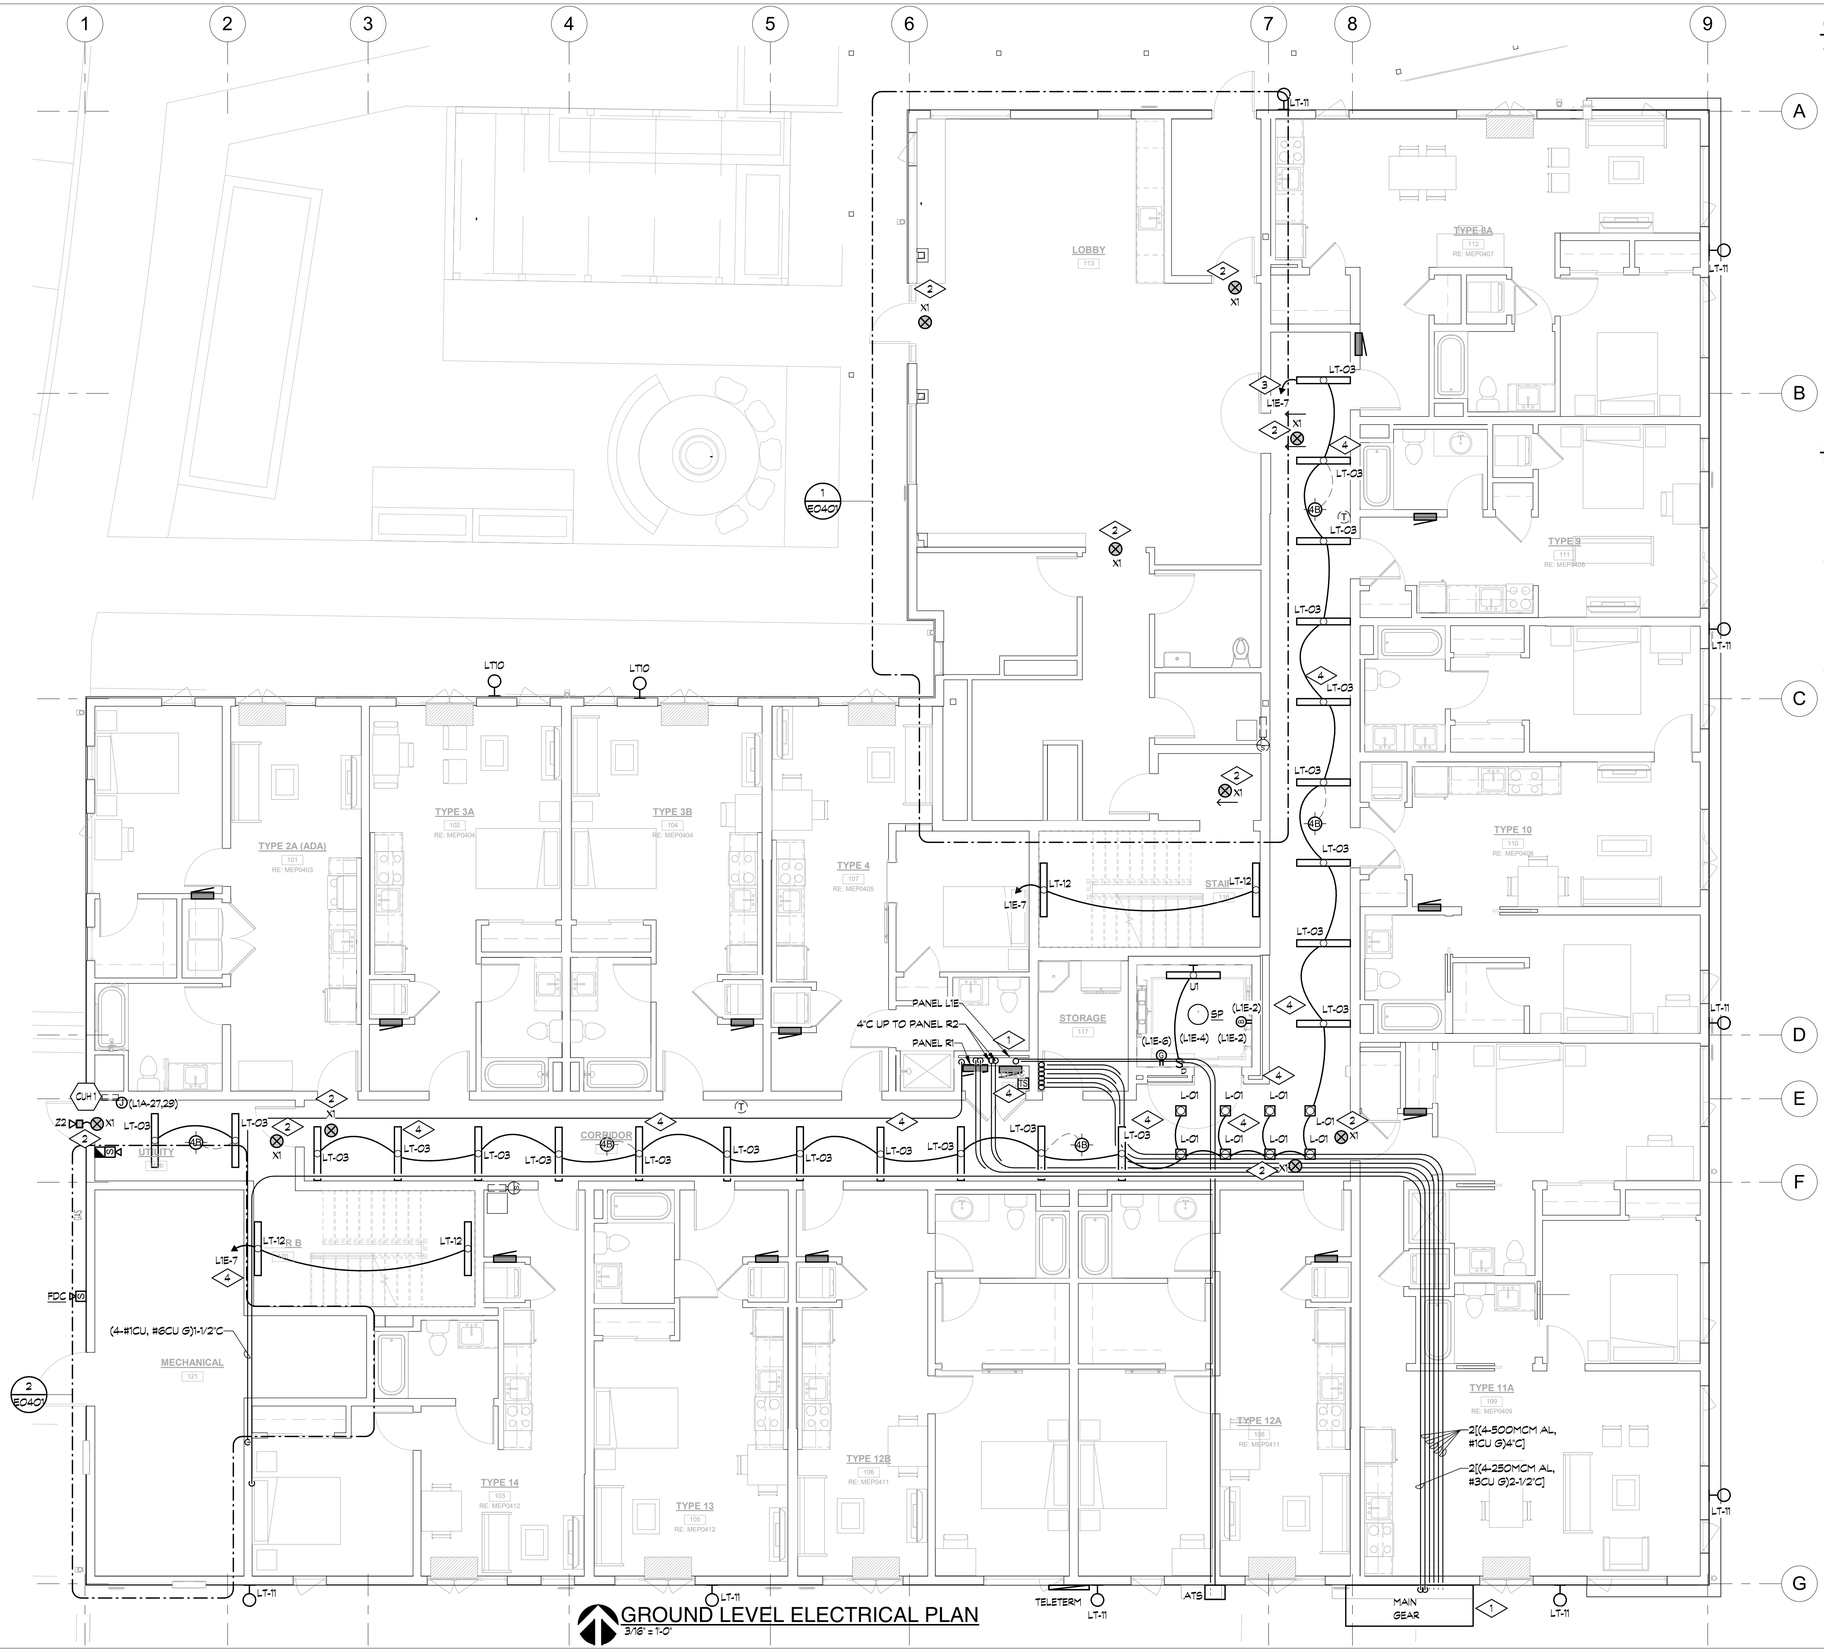
A. The air conditioning system shall be a DX cooling system using a wall, ceiling or ducted air handler with central remote condenser(s) System efficiency shall meet or exceed 16.0 EER.

B. The unit shall have a manufacturer's warranty for a period of one (1) year from date of installation. The compressor shall have a warranty of six (6) years from date of installation.

C. The indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, an emergency operation function and a test run switch. Indoor unit and refrigerant pipes will be charged with dry air instead of R22 before shipment from the factory. The cabinet panel shall have provisions for a field installed filtered outside air intake. Branch ducting shall be allowed from cabinet. The evaporator fan shall be two speed and shall be statically and dynamically balanced, with permanently lubricated bearings. The auto air swing vanes shall automatically swing up and down. Return air shall be filtered by means of a long-life filter to provide approximately 2,500 hours of use in a normal office environment before cleaning.

D. The evaporator coil shall be copper with aluminum fins with inner grooves. All tube joints shall be brazed with phoscopper or silver alloy. The coils shall be pressure tested at the factory. A condensate pan and drain shall be provided under the coil. The condensate pump shall be able to raise drain water 33 inches above the condensate pan.

E. The controller shall consist of an On-Off switch, Cool/Dry-Fan selector, Thermostat setting, Timer Mode, High-Low fan speed, Auto Vane selector, Test Run switching and Check Mode switching. Temperature changes shall be by 2°F increments. The control system shall consist of two interconnected microprocessors. Wiring between the indoor unit and controller shall have no splices. Manufacturer shall provide 2 conductor 18 Ga. stranded wire for connection to remote controller. Microprocessor located in the indoor unit shall have the capability of sensing return air temperature and indoor coil temperature, receiving and processing commands from the wired controller, providing emergency operation and controlling the outdoor unit. Normal operation of the remote contro



GENERAL NOTES

A. IN THE CASE OF A DISCREPANCY BETWEEN GENERAL NOTES, DETAIL NOTES, SPECIFICATION, OR GRAPHICAL DEPICTIONS, IT IS THE CONTRACTORS RESPONSIBILITY TO CLARIFY DESIGN INTENT WITH ENGINEER.

B. ELECTRICAL CONDUITS, WATER, SEWER AND GAS LINES MUST FIT WITHIN WALLS. CONFLICTS WITH OTHER TRADES MUST BE COORDINATED OR WORK WILL BE REDONE.

C. GFCI PROTECTION: BASIS OF DESIGN IS GFCI PROTECTION PROVIDED AT PANEL. EC MAY PROVIDE ALTERNATE PRICING WHERE PERMITTED BY CODE TO PROVIDE DOWNSTREAM GFCI PROTECTION OF DEVICES WITH A SINGLE GFCI RECEPTACLE. (DEDICATED NEUTRAL SHALL BE PROVIDED FOR GFCI BREAKERS).

D. PROVIDE TAMPER RESISTANT RECEPTACLES IN THE FOLLOWING AREAS PER NEC 406.12.
   a. DWELLING UNITS, GUEST ROOMS, DORMITORY UNITS.

E. COORDINATE ALL DEVICE AND FIXTURE LOCATIONS WITH FURNITURE, EQUIPMENT, MILLWORK AND MECHANICAL SYSTEM (DUCTWORK) LAYOUT PRIOR TO ROUGH-IN.

F. ALL EXTERIOR ELECTRICAL COMPONENTS SHALL MEET ALL NEC INSTALLATION AND LABELING REQUIREMENTS FOR WET LOCATIONS.

DETAIL NOTES THIS SHEET

1. PROPOSED ELECTRICAL SERVICE/GEAR. FIELD VERIFY EXACT LOCATION, MAINTAIN REQUIRED CLEARANCES PER NEC.
2. EXTEND EMERGENCY/EXIT LIGHTING TO AN UNSWITCHED LIGHTING CIRCUIT SERVING THE AREA.
3. LIGHTING IN THIS AREA CONTROLLED VIA OCCUPANCY SENSOR DIMMED TO 50%. HALLWAYS AND STAIRS ARE ALWAYS ON.
4. PROPOSED LOCATION FOR LIGHTING CONTROL PANEL. PROVIDE DEDUCT ALTERNATE PRICING FOR ASTRONOMICAL TIMECLOCK (INTERMATIC ET8215C OR EQUIVALENT).
5. LIGHTING TO BE ON GENERATOR WHEN THE POWER IS TURNED OFF.

Interior Lighting Compliance Statement

Compliance Statement: The proposed interior lighting design represented in this document is consistent with the building plans, specifications, and other calculations submitted with this permit application. The proposed interior lighting systems have been designed to meet the 2021 IECC requirements in COMcheck Version COMcheckWeb and to comply with any applicable mandatory requirements listed in the Inspection Checklist.

PROJECT LOCATION

STEAMBOAT BASECAMP AREA 1B RESIDENTIAL
1901 CURVE PLAZA
STEAMBOAT SPRINGS, CO 80487

DRAWING TITLE

ENLARGED ELECTRICAL PLANS

SEAL

COLORADO LICENSED — MICHAEL DEAN VAIR — 38983 — 03/13/2026 — PROFESSIONAL ENGINEER

DATE: 03.13.2026
DRAWN BY: OD/SG
CHECKED BY: MV
PROJECT NO: 25135

DRAWING NO: **E0401**

LEGEND

- MAIN DISTRIBUTION CENTER
- PANELBOARD
- ELECTRIC SERVICE METER
- CT — CURRENT TRANSFORMER
- T — TRANSFORMER
- SPD — SURGE PROTECTION DEVICE
- CONCEALED CIRCUIT
- UNDERFLOOR / UNDERGROUND CIRCUIT
- EXPOSED CIRCUIT
- WM — WIREMOLD (SURFACE WIREWAY)
- PM — PLUGMOLD
- P-3 — HOMERUN TO PANELBOARD(ONE ARROW / CKT, PNL & CKT #'S SHOWN)
- (44,46) — CIRCUIT NUMBER(S) FOR SPECIFIED PANEL
- CONDUIT TURNS UP
- CONDUIT TURNS DOWN
- J J — JUNCTION BOX / CARD READER
- PORCELAIN LAMP HOLDER (PC; PULL CHAIN)
- LIGHT FIXTURE; SURFACE MOUNTED
- RECESSED LIGHT FIXTURE
- WALL MOUNTED LIGHT FIXTURE
- EXIT LIGHT; DIRECTIONAL ARROW
- BATTERY PACK
- SURFACE FLUORESCENT FIXTURE
- RECESSED FLUORESCENT FIXTURE
- SINGLE OUTLET; C-CLOCK (+70')
- DUPLEX RECEPTACLE (IG: ISOLATED GROUND)
- CEILING DUPLEX RECEPTACLE
- DUPLEX RECEPTACLE - GFCI
- DUPLEX RECEPTACLE - GFCI BREAKER
- DUPLEX RECEPTACLE - TAMPER RESIST
- SPLIT WIRE DUPLEX
- QUADRAPLEX (DOUBLE DUPLEX)
- COMB. SWITCH / RECEPTACLE
- FLOOR MOUNTED RECEPTACLE
- SPECIAL PURPOSE (AS NOTED)
- TELEVISION OUTLET
- MOTOR OUTLET (ets - switched thermal overload)
- TELEPHONE TERMINAL
- TELEPHONE OUTLET
- FLOOR MTD. TELEPHONE OUTLET
- COMPUTER OUTLET
- COMB. TELE/COMPUTER OUTLET
- TOGGLE SWITCH (s-switching, 2-2 pole, 3-3 way, 4-4 way, p-pilot light, k-keyed, to-thermal overload, t-timer)
- WALL MOUNTED LIGHTING CONTROL DEVICE RE: LIGHTING CONTROL DEVICE SCHEDULE
- CEILING MOUNTED LIGHTING CONTROL DEVICE RE: LIGHTING CONTROL DEVICE SCHEDULE
- THERMOSTAT
- TS — TIME SWITCH
- PE — PHOTOCELL
- PUSH-BUTTON STATION
- SAFETY SWITCH
- MOTOR STARTER /LIGHTING CONTACTOR
- COMBINATION MOTOR STARTER
- R — RELAY
- FACP — FIRE ALARM CONTROL PANEL
- ANNUNCIATOR
- PULL STATION
- HORN
- HL — HORN / LIGHT COMBINATION
- HS — HORN / STROBE
- S — STROBE
- BELL
- OS & Y VALVE
- F — FLOW SWITCH
- ROOM DETECTOR (SMOKE)
- $\bullet_T$ — ROOM DETECTOR (THERMAL)
- DUCT DETECTOR
- REMOTE INDICATING LIGHT / TEST SWITCH
- DOOR HOLDER
- CHIME
- FUSED SWITCH
- CIRCUIT BREAKER
- GROUND CONNECTOR
- MECHANICAL EQUIPMENT
- DETAIL NOTE
- KITCHEN / MEDICAL EQUIPMENT
- (E) — EXISTING TO REMAIN
- (ER) — EXISTING TO BE RELOCATED
- (ED) — EXISTING TO BE DEMOLISHED

LIGHTING CONTROL DEVICE SCHEDULE

KEY	MODE	DESCRIPTION	MOUNTING	MANUFACTURER/#	VOLT
1D	VACANCY	WALL SWITCH, VACANCY SENSOR, DUAL TECHNOLOGY, 0-10V DIMMING, 20' RANGE	WALL MOUNT	ACUITY WSX PDT D SA XX	120
1E	OCCUPANCY	WALL SWITCH, OCCUPANCY SENSOR, 2-POLE, DUAL TECHNOLOGY, 20' RANGE, MINIMUM FAN RUNTIME (ASHRT) FOR ASHRAE 62.2	WALL MOUNT	ACUITY WSX PDT 2P FAN ASRT XX	120
4B	VACANCY / PHOTOCELL	CEILING SENSOR, DUAL TECHNOLOGY, EXTENDED RANGE (24' @ 9' AFF), 360° COVERAGE PATTERN, PHOTOCELL WITH DIMMING, LOW VOLTAGE AUXILIARY RELAY (POWERPACK REQUIRED; nPP16 D)	CEILING	ACUITY nCM PDT 10 ADCX AR RJB	LOW

NOTES: *NOTIFY ENGINEER OF ANY DISCREPANCIES BETWEEN MODEL NUMBERS AND DESCRIPTIONS PRIOR TO ORDERING
*VERIFY DIMMING COMPATIBILITY W/ LIGHT FIXTURES AND NOTIFY ENGINEER OF ANY CONFLICTS PRIOR TO ORDERING

EV ELECTRICAL EQUIPMENT

KEY	DESCRIPTION	LOAD	VOLT	CIRCUIT	CONNECTION	REMARKS
EC2	EV READY	40 MCA	208/1	(2-#3,#10G) 1"PVC	J-BOX	
EC3	EV CAPABLE	40 MCA	208/1	(FULL STRING) 1"PVC	J-BOX	

NOTES: *COORDINATE ALL ROUGH-IN HEIGHTS AND LOCATIONS WITH KITCHEN VENDOR AND/OR OWNER.

ONE LINE DETAIL NOTES

1. PROVIDE INTEGRATED SURGE PROTECTION DEVICE, TYPE 1 OR 2. MINIMUM RATING OF 80kA, RECOMMEND 200kA PER PHASE.

BUILDING RESIDENTIAL LOAD CALCS BASED UPON NEC 220.84

Number of Units				74	
Total square footage				41,610

NOTES: SWITCHBOARDS, PANELBOARDS AND LOAD CENTERS ARE TO BE FULLY RATED AS SHOWN. PROVIDE A DEDUCT PRICE TO USE SERIES RATED EQUIPMENT AND PROVIDE THE TESTED OCPD COMBINATION USED TO OBTAIN THE SERIES RATING. ALL EQUIPMENT TO HAVE PERMANENTLY ATTACHED LABELING PROVIDED BY THE EQUIPMENT MANUFACTURER AND INSTALLER PER NEC 110.22 AND 240.86 (B)
PROVIDE MARKING ON ALL SERVICE EQUIPMENT WITH MAXIMUM CALCULATED FAULT CURRENT PER NEC 110.24
*AVAILABLE FAULT CURRENT AT TRANSFORMER CACLUCATED BASED ON %Z FROM UTILITY COMPANY DESIGN STANDARDS. IF TRANSFORMER SIZE IS OTHER THAN SHOWN, NOTIFY ENGINEER.

3. TAMPER SWITCH, TROUBLE ALARM
4. PULL STATIONS: FACP
5. SPARE

FIRE ALARM NOTES

1. FIRE ALARM PANEL WITH AUTO DIALER, BATTERIES, ETC BY ELECTRICAL CONTRACTOR. WIRE UP ANCILLARY EQUIPMENT TO THIS PANEL AS REQUIRED BY LOCAL CODE.
2. THERE IS ONE FACP TO SERVE ENTIRE BUILDING. COORDINATE NUMBER AND LOCATION OF FLOW, TAMPER, ETC, W/ LOCAL FIRE DEPARTMENT.
3. COORDINATE ANNUNCIATORS, MAPS AND AREA INDICATORS W/ FIRE DEPARTMENT.
4. RESIDENTIAL DETECTORS ARE LOCAL ONLY AND DO NOT INITIATE SYSTEM ALARM. THEY SHALL BE PROVIDED W/ BATTERY BACKUP. PROVIDE RELAY TO SIGNAL MAIN FACP FOR LOW FREQUENCY (520HZ) SOUNDERS TO ALERT LOCAL ONLY UPON LOCAL DETECTION WHERE REQUIRED BY LOCAL AHJ.

FIRE ALARM ONE LINE DIAGRAM — 2

EGAUGE GENERAL NOTES

A. NO DAISY CHAIN OPTION; PROVIDE AND COORDINATE LOCATION OF LEVITON DATA ACQUISITION SERVER.

B. UNSHIELDED RJ45 PLUGS ONLY (CAT V OR CAT VI CABLE).

C. LABEL CT WITH CT IDENTIFIER AND CT NAME. DO NOT COVER CT FACTORY APPLIED NAMEPLATE OR DIRECTION INFORMATION.

D. PROVIDE CONNECTION OF LEVITON DATA ACQUISITION SERVER TO OWNER NETWORK FOR RECORDING AND INTERNET SERVICE.

E. CONFIRM WIRE SETS USED PRIOR TO COMPLETING EQUIPMENT ORDER. CONFIRM CONDUCTORS WILL PHYSICALLY FIT WITHIN CTS USED.

F. UTILIZE SPLIT CORE CTS; CTS SHALL BE APPLIED IN THE PROPER DIRECTION/ ORIENTATION.

G. VERIFY DISTRIBUTION PANEL HAS ADEQUATE PHYSICAL SPACE FOR CTS TO BE APPLIED SAFELY.

H. VERIFY PHASE CIRCUIT IS CONNECTED AND PROGRAMMED FOR POWER CALCULATIONS USING ASSOCIATED METER VOLTAGE INPUT (L1 = PHASE A, L2 = PHASE).

DIVISION 26 - ELECTRICAL

SECTION 26 01 00 - GENERAL PROVISIONS

1.01 WORK INCLUDED:

A. The work included by this division of the specifications includes furnishing all labor, materials, equipment, and services, including minor items omitted but necessary to construct and install the complete systems described by the Contract Documents and specified below. "Contractor" refers to the Electrical Contractor. The general conditions of the specifications apply and are included in this part of this section.

1. Power Distribution System
2. Interior and Exterior Lighting System
3. Telephone Raceway System
4. Data Raceway System
5. Fire Alarm System
6. Emergency Lighting System
7. Electric Heating System

1.02 CODES AND REGULATIONS:

A. Comply with state and local codes, and utility company regulations. Final interpretations will be made by the local inspection authority. The Contractor to verify the governance of the following Codes, including any local amendments and supplementary codes such as the Codes of the National Fire Protection Association:

1. Building Code: 2021 International Building Code
2. Plumbing Code: 2021 International Plumbing Code
3. Mechanical Code: 2021 International Mechanical Code
4. Fire Code: 2021 International Fire Code
5. Gas Code: 2021 International Fuel Gas Code
6. Energy Code: 2021 International Energy Conservation Code
7. Electrical Code 2023 National Electrical Code

1.03 EQUIPMENT AND MATERIALS STANDARDS:

A. Equipment and materials shall be new, UL-listed for the use intended, and free from damage or defect. They shall comply with the latest industry standards.

1.04 CONTRACT DRAWINGS:

A. Illustrate the general design and extent of performance required. All dimensions and locations shall be taken from the Architectural drawings. Consult with Architectural plans and locate all ceiling equipment where indicated on reflected ceiling plans.

1.05 SHOP DRAWINGS

A. Submit products data and/or shop drawings as required by the Architect for the following:

1. Switches, dimmers, receptacles and coverplates
2. Switchboards, Panelboards/Loadcenters
3. Disconnect switches
4. Fuses
5. Light fixtures
6. Light poles
7. Fire alarm system and equipment

B. Quality of specific equipment is established by manufacturer's catalog number. Alterations caused by any Substitution shall be accomplished at no additional expense to the Owner

C. Manufacturers not listed may submit for acceptance as an "approved equivalent." Requests for an "equivalent" means "approved equivalent". Four copies of such submittal must be received by the Engineer seven (7) working days prior to bid date.

1.06 WARRANTY:

A. The contractor shall be responsible for the successful operation of electrical systems, equipment, and materials installed under this Contract for a period of one year from the date of final acceptance. Defective equipment or materials shall be repaired or replaced at no expense to the Owner.

1.07 PRODUCT HANDLING AND CLEAN UP:

A. Equipment shall be left clean and undamaged, to the satisfaction of the Owner. The General Conditions take precedence.

1.08 CUTTING AND REPAIRING:

A. The contractor shall be responsible for all cutting, drilling, welding, and repair required for his portion of the work. Coordinate with the Architect. The General Conditions take precedence.

1.09 OPERATING AND MAINTENANCE DATA:

A. Provide the Owner with operating and maintenance instructions(four copies) required for operation of all electrical systems. Bind the written instructions in a notebook. The General Conditions take precedence.

1.10 PERMITS:

A. The contractor shall pay for all fees, taxes, secure permits, licenses, and inspections required for the project.

1.11 TEMPORARY SERVICES:

A. Provide temporary power and lighting as required by the General Contractor, in accordance with OSHA and N.E.C. standards.

1.12 COORDINATION

A. Coordinate outlet device and equipment locations with the Architectural Plans and work of other trades. Locate on horizontal and vertical lines to avoid interference and to provide functional use of all equipment. Verify electrical power characteristics before ordering fixtures, equipment, etc.

B. Mechanical work performed by this contractor will conform to the standards of Division 21-23. Mechanical equipment motors and controls shall be furnished, set in place, and wired according with the following schedule unless otherwise noted or specified. MC = Division 21-23 EC = Division 26-28

Item	Furn By	Set By	Power Wiring	Control Wiring
Combination starters	MC	EC	EC	MC
Equipment motors	MC	MC	EC	--
Motor starters & O.L. relays	MC	EC	EC	MC
Disconnect switches	EC	EC	EC	MC
Thermal overload heaters (1)	EC	EC	EC	--
Variable Speed Drives	MC	EC	EC	MC
Control relays/transformers	MC	MC	EC	MC
Temperature control panels	MC	MC	EC	MC
Temp. Controls conduit/wiring	MC	MC	--	MC
Actuator and solenoid wiring	MC	MC	--	MC
Pushbuttons & pilot lights	MC	MC	--	MC
Room thermostats	MC	MC	--	MC
Thermostats: line voltage	EC	EC	EC	--

C. The general guideline for the division between control(by MC) wiring and power wiring(by EC) is that power wiring carries the current which energizes a motor, control wiring does not. Control wiring may be 120V, which would be the responsibility of the MC. Control motors are wired by the MC.

D. Examine the site and become aware of existing conditions, utilities, and other issues affecting the satisfactory completion of the project.

1.13 DELIVERY, STORAGE, HANDLING:

A. Provide necessary hauling and hoisting equipment. Protect the materials of this Division before, during, and after installation.

1.14 AS-BUILT DRAWINGS:

A. Keep a current set of "as-built" drawings on site. Upon completion of the work, furnish engineer with a reproducible prints showing the "as-built" installation.

1.15 PROJECT/SITE CONDITIONS:

A. Visit the site to become familiar with location and the various conditions affecting the work, including existing utilities.

2.01 ACCESS PANELS:

A. The electrical Contractor shall furnish and General Contractor shall install access panels where required for access to equipment. The electrical Contractor shall include the cost of installation in his bid. Access panels shall be adequately sized, of a type approved by the Architect and shall be fire or smoke-rated as required.

3.01 EXCAVATION AND BACKFILLING:

A. Verify the location of underground utilities before excavation; the contractor is responsible for any damage to underground utilities. Provide excavating and backfilling for electrical work. Backfill in 12" layers, mechanically tamp to 95% proctor standards. Protect according to OSHA standards. The General Conditions take precedence.

B. Provide marker tape 12" above exterior underground service conduits(power, telephone, television).

3.02 START-UP PROCEDURES:

A. Follow manufacturer's recommended procedures in starting up the equipment; damage caused during start-up shall be replaced at no expense to the owner.

3.03 HANGERS AND SUPPORTS:

A. Support conduit and equipment from the structure to prevent sagging, pocketing, swaying, and vibrations, and arranged to provide for expansion and contraction. Brackets, clamps, and hangers shall be steel or copper of a type, acceptable to the Engineer. Chain, perforated iron or wire hangers are not permitted.

B. Conduit on the roof will be supported above the roof on roof pads. The pads shall be approximately 6"Wide by 6" high by the length as required. They shall be made of recycled rubber, rated for 500lbs/ft loading each. The pads will have galvanized steel "C" channel attached to the top, which can accommodate pipe clamps to secure the conduit. This configuration of individual piping pads may be expanded to include two pads supporting a trapeze style support where multiple conduits are racked together. The pads are C-series manufactured by Cooper B-line or approved equivalent.

3.04 SLEEVES AND PLATES

A. Provide sleeves and inserts for all conduit. The contractor shall be responsible for the cost of cutting and patching required for piping where sleeves and inserts were not installed or where incorrectly located. Sheetrock joint compound may be used to seal openings in non-rated walls(insulation to be continuous through walls.

B. Drill holes as required for the installation of hangers required for the mechanical work.

C. Where sleeves are placed in exterior walls below grade, the space between the pipe or conduit and the sleeves shall be made completely water-tight.

D. Seal all piping passing through fire-rated construction with approved material to maintain air-tight, fire-rated integrity, with a U.L. listed assembly compatible with the wall or floor assembly being penetrated.

SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL

1.01 GENERAL:

A. Provide complete systems of conductors and raceways using conduit and/or cable assemblies appropriate to the function and location, and specifically approved in chapter three of the N.E.C..

2.01 CONDUIT:

A. The following raceways are approved for use on this project, where approved by the N.E.C.:

1. EMT: Electrical metallic tubing, galvanized
2. GRC: Rigid steel conduit, galvanized
3. PVC: Polyvinyl chloride conduit, schedule 40
4. IMC: Intermediate metal conduit, galvanized

2.02 CABLE ASSEMBLIES:

A. The following cable assemblies may be used in the power distribution system in concealed locations, where approved by the N.E.C.:

1. MC: Metal clad cable
2. NM/NMC: Non-metallic sheathed cable
3. SE/SER: Service entrance cable (From MDC to residences)

2.03 BOXES:

A. Provide galvanized steel outlet and junction boxes, except where otherwise indicated. Boxes shall be a minimum 4" square or octagonal, depth as required. Provide weather-proof type cast boxes with gasket and cast coverplate for exterior outlets or wet locations. Outlet boxes shall be of the proper type and design for the fixture or device to be installed. Through the wall boxes are not permitted. Provide plaster or tile rings for all flush outlets installed where required. Boxes shall be manufactured by Raco, Steel City, National or equivalent.

B. Interior floor boxes shall be non-metallic or cast steel in concrete or slab on grade installations, and shall be rated for the use. Floor boxes above grade shall be non-metallic or stamped steel, rated for the use. Multi-gang boxes shall be used where specified. Coverplates shall be polished brass with 'flip lids' for receptacles and connectors. Provide carpet flanges where appropriate.

2.04 CONDUCTORS:

A. Provide a complete set of power conductors, rated 600 volts, of the quantity, size and type required for the function.

1. Conductors shall be copper, except where specifically noted. Conductors shall be solid for wire sizes No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
2. Aluminum conductors will be accepted only where specifically indicated by the Contract Documents. Aluminum conductors must be terminated according to the manufacturers instructions, including use of proper joint compound, use with aluminum rated lugs, and proper torqueing of the lugs.

2.05 INSULATION:

A. Provide wire with the following minimum insulation standards:

1. Branch circuits, panelboard feeders, service entrance conductors: THWN-2, XHHW(90C). The conductors shall be applied using the 75C rating.
2. Connections to fixture ballasts, and wiring runs in or through fixture wiring channels: Insulations listed in table 402.5 of the N.E.C., except for wiring made with asbestos.
3. Cord connections: Cords listed in table 400.4 of the N.E.C., except for wiring made with asbestos.

2.06 LUGS:

A. Lugs for all equipment will be rated for the use. Lugs will be suitable for copper or aluminum conductors, rated for 75C.

2.07 SWITCHES AND RECEPTACLES:

A. Provide specification grade devices throughout. Switches and duplex receptacles may be commercial grade. Devices shall be manufactured by Hubbell, Leviton, General Electric, Bryant, Slater, Pass & Seymour, Inc., Sierra, or Arrow-Hart.

B. Except where noted, plates shall be plastic, color to match the devices with matching screws for receptacles, switches, telephone, and TV outlets. Provide blank coverplates for unused outlets. Coverplates for multi-gang boxes shall be sized for the box it covers.

C. Devices and their coverplates colors shall be coordinated with Architect and Owner. In mechanical rooms, etc, the coverplates may be galvanized steel

2.08 DIMMERS:

A. Incandescent dimmers shall be the linear slide-type with aluminum fins. Dimmers shall be Lutron Nova series or equivalent.

B. Fluorescent dimmers shall be the linear slide-type with aluminum fins. The dimmers shall be closely coordinated with the ballast type of the specific fixture being controlled and must be field coordinated before ordering. Dimmers shall be Lutron Nova series or equivalent.

C. LED dimmers must be selected by, or specifically approved by, the specific fixture manufacturer or supplier. Slide type dimmers are preferred where available.

D. When switches and dimmers are located side by side, switches shall have identical appearance as dimmers. Dimmers shall in no case have heat fins removed or modified.

E. Dimmers shall be manufactured by Lutron, Hunt, Prescolite, or equivalent

3.01 WIRING:

A. The drawings are schematic in nature; alternative wiring paths, different conduit fill, etc, installed in conformance with the N.E.C. are allowed. Conductors must be derated per code.

B. Branch circuits shall use minimum No. 12 AWG wiring for branch circuits, protected by 20 ampere circuit breakers. Control wiring may be No. 14 minimum. If distance from panel to first outlet is 75 feet or greater (for 120-volt circuits) or 150 feet or greater (for 277-volt circuits), provide No. 10 AWG.

C. Use PVC in earth or in slabs in contact with earth. Outside the building, install a minimum of 30" below finished grade.

D. Where mechanical damage occur, use galvanized rigid steel or intermediate metal conduit.

E. Electric metallic tubing may be used in all applications, except where prohibited by code or otherwise noted.

F. Do not install exposed conduit in areas open to the public. Exposed conduit may be installed at surface-mounted equipment and other locations acceptable to the Architect. Run exposed conduit parallel to, and at right angles with, the building lines.

G. Direct burial wiring shall not be used.

H. Use flexible metallic conduit for connections to motors, fixtures, or other equipment where vibration is encountered. Provide sealtite flexible metallic conduit in wet areas such as kitchens, equipment rooms, on roofs, etc.

I. Provide a ground wire in non-metallic conduit and flexible conduit. Ground wires shall be increased in size where circuit wiring is increased for voltage drop.

J. Circuits fed through AFCI breakers shall have separate neutrals with no cross or ground connections; wiring shall be installed per the breaker manufacturers instructions.

K. Multi-wire branch circuits shall utilize handle ties on breakers, or other grouped disconnecting means per NEC 210.4(B).

3.02 OUTLET BOXES, DEVICES AND FITTINGS:

A. Install receptacle and telephone outlets 18" to center-line above floor in general locations; install at switch height where shown in combination; install 46"to center-line in mechanical equipment rooms.

B. Install receptacles vertically, ground pole down.

C. Install switch outlets 46" to center-line above floor on latch side of door. Verify door swing prior to installation. Use gang boxes for multiple-device installation as required.

D. Install outlets shown on the drawings "back-to-back" with a minimum of 6" lateral separation between them.

SECTION 26 20 00 - SERVICE AND DISTRIBUTION

1.01 SERVICE ENTRANCE:

A. Power will be available from the secondary side of transformer(s) provided by the utility company. This service shall be 120/208 volt, 3 phase, 4 wire, 60 hertz A.C. for normal power and lighting requirements. General arrangement of the service equipment is shown on the drawings. Load balance the entire system to within 15% per phase.

1.02 GROUNDING:

A. Provide a complete grounding system in accordance with Section 250 of the N.E.C.

B. Supplemental electrode to be installed unless resistance of 25 ohms to earth can be documented.

2.01 PANELBOARDS:

A. Provide circuit breaker-type panelboards as detailed on the drawings. Provide separate ground bus. Provide fronts with door and latch with locks keyed alike. Install panels 6'6" above finished floor to top of trim. Where panels are mounted side by side, align tops of panels. Mount a typed directory, identifying each circuit, in a directory frame. Provide typed source label identifying source of power for each panel. Install trims and doors with primer coats in finished areas. Provide one spare 3/4" conduit for each 3 unused poles in flush-mounted panelboards; extend from to an accessible point above a hung ceiling; cap and identify.

B. Breakers shall be full width, thermal magnetic, bolt-on type. Provide multi-pole breakers with common trip and single operating handle; handle ties are acceptable for multi-wire branch circuits.

1. Breakers serving residential projects shall be AFCI breakers per NEC 210.12.
2. Breakers serving restaurant kitchens and bars, or where required by code, shall be GFCI breakers. GFCI receptacles may be used only where the receptacles are not located behind equipment.
3. HACR breakers shall be used for HVAC equipment in accordance with the equipment manufacturer.
4. HID breakers shall be used where HID or fluorescent fixtures are normally panel switched.

C. Surge protective device shall be integral and either type 1 or 2 d with minimum rating of 80kA.

D. Lugs on mains and branch breakers shall be rated for 75C or 60C, copper or aluminum wiring.

E. Panelboards(240VAC) shall be Square D type NQOD or equivalent by I.T.E., G.E., or Cutler Hammer.

2.02 LOADCENTERS:

A. Provide circuit breaker-type loadcenters as detailed on the drawings. Provide separate ground bus. Provide fronts with door and latch with locks keyed alike. Install panels 6'6" above finished floor to top of trim. Where panels are mounted side by side, align tops of panels. Mount a typed directory, identifying each circuit, in a directory frame. Provide typed source label identifying source of power for each panel. Install trims and doors with primer coats in finished areas. Provide one spare 3/4" conduit for each 3 unused poles in flush-mounted loadcenters; extend from to an accessible point above a hung ceiling; cap and identify.

B. Breakers shall be full width, thermal magnetic, plug-in type. Provide multi-pole breakers with common trip and single operating handle; handle ties are acceptable for multi-wire branch circuits.

1. Breakers serving residential projects shall be AFCI breakers per NEC 210.12.
2. Breakers serving restaurant kitchens and bars, or where required by code, shall be GFCI breakers. GFCI receptacles may be used only where the receptacles are not located behind equipment.
3. HACR breakers shall be used for HVAC equipment in accordance with the equipment manufacturer.
4. HID breakers shall be used where HID or fluorescent fixtures are normally panel switched.

C. Surge protective device shall be integral and either type 1 or 2 d with minimum rating of 80kA.

D. Lugs on mains and branch breakers shall be rated for 75C or 60C, copper or aluminum wiring.

E. Load centers shall be Square D type QO or equivalent by I.T.E., G.E., or Cutler Hammer.

2.03 FUSIBLE DISTRIBUTION SWITCHGEAR:

A. Provide free-standing, floor-mounted, fusible type switchboard as shown on the plans.

B. Switchboard shall be 90" high, depth as indicated, constructed so rear sections align, with internal components removable from the front.

C. Buses shall be copper or tin-plated aluminum, braced for short- circuit currents of 100,000 RMS symmetrical amperes. Horizontal bars shall be tape-wrapped and insulated. Maximum temperature rise shall be 55C over 25C ambient. Provide full length and sized horizontal busses, including neutral and ground. Vertical sections shall be fully bussed. All lugs shall be rated for 75C or 60C copper or aluminum wiring.

D. Manufacturers shall be General Electric "AV line" with QMR construction or equivalent by Square D, I.T.E., or Westinghouse.

2.04 FUSIBLE DISTRIBUTION PANELBOARD:

A. Provide wall hung fusible type panelboard as shown on the plans.

B. Rear sections shall constructed with internal components removable from the front.

C. Buses shall be copper or tin-plated aluminum, braced for short- circuit currents of 100,000 RMS symmetrical amperes. Horizontal bars shall be tape-wrapped and insulated. Maximum temperature rise shall be 55C over 25C ambient. Provide full length and sized busses, including neutral and ground. Vertical sections shall be fully bussed. All lugs shall be rated for 75C or 60C copper or aluminum wiring.

D. Manufacturers shall be Square D type QMD construction or equivalent by General Electric, I.T.E., or Westinghouse.

2.05 CURRENT TRANSFORMER CABINETS:

A. Provide current transformer cabinets, including interior lugs and bussing, as required to accommodate the requirements of the utility company. The cabinets shall be U.L. listed, weatherproof as required. All lugs shall be rated for 75C or 60C wiring.

2.06 METER STACK:

A. Provide wall mounted modular meter stacks where shown on the plans. The unit shall be NEMA 3(NEMA 1), made of galvanized steel. The incoming section shall use a fused switch.

B. The busses shall be copper or tin-plated aluminum, braced for short-circuit currents of 65,000AIC symmetrical amperes. Vertical sections shall be fully bussed top to bottom. Provide full length and sized horizontal busses, including neutral and ground. All lugs shall be rated for 75C or 60C copper or aluminum wiring.

C. Meter stack shall accommodate both single phase and three phase, 100Amp and 200Amp meters and breakers. Additional sections shall be capable of simple connection.

D. The meter stack shall be manufactured by American Midwest Power (AMP), Square D, G.E., Westinghouse ITE or equivalent.

2.07 SAFETY SWITCHES:

A. Provide normal duty, enclosed, fusible and non-fusible safety switches as indicated on the plans. All lugs shall be rated for 75C or 60C copper or aluminum wiring. Provide enclosures suitable for the surrounding area and conditions. Label switches for feeder or motor supplied. The switches shall be manufactured by Square D, I.T.E., G.E., Cutler Hammer, or equivalent.

2.08 FUSES:

A. Provide power fuses of the time-delay type unless otherwise indicated. Fuses shall be manufactured by Bussman, Gould Shawmut, or equivalent. Provide one (1) complete set of fuses for fuse-holding devices, sized according to the motor and/or conductor to be protected. Provide a hinged cover cabinet for storage of spare fuses: three spare fuses of each fuse size.

3.01 WIRING FOR EQUIPMENT:

A. Provide branch circuits, feeders, junction boxes, disconnect switches, etc as required for a complete system; make power connections to motors and controls for heating, ventilating, air conditioning, plumbing, owner furnished and fire protection equipment as required.

B. Kitchen equipment. Refer to the Kitchen Equipment Contractor's drawings for final sizing, locations, and rough-in heights. The Electrical Contractor shall provide final circuits and connections to kitchen electrical equipment. Sealtite conduit and fittings shall be used on runs inside refrigerated bases and at dish tables.

C. Provide connections to hood fire suppression system(s). The electrical contractor is responsible for wiring the interlock controls for hood related air handling equipment, including low voltage interlocks, and interlocks within building HVAC equipment where required.

SECTION 26 50 00 - LIGHTING

1.01 RECESSED LED:

A. Recessed LED luminaires shall be pre-wired. Openings shall be neatly made so they are completely concealed after the trim is installed. Luminaires installed in a grid ceiling shall be supported by the framing system, not by ceiling panels. Install metal plaster frames in plaster ceilings. Fixtures shall have thermal protection where required by the N.E.C. and local codes.

1.02 EXTERIOR LIGHTING FIXTURES:

A. Provide weather-proof luminaires for mounting as shown. Provide lamps of size and wattage as indicated on the drawings. Provide underground wiring to exterior lighting as shown on the drawings.

2.01 INTERIOR LIGHTING FIXTURES:

A. Securely support and anchor fixtures and outlet boxes. Where lighting fixtures are installed in a lay-in grid ceiling system, secure fixtures to tees by installing earthquake clips at each corner of the fixture. Provide supports required, including structural members if needed. Provide separate junction boxes and wire to recessed fixtures in flexible conduit with Type AF wire, unless acceptable pre-wired fixtures are used. Conceal openings cut in ceilings for recessed fixtures with fixture trim installed. Coordinate installation of recessed fixtures with ceiling installer.

2.02 EXTERIOR LIGHTING FIXTURES:

A. Exterior lighting fixtures, raceways, equipment, etc. shall be weather-proof and suitable for temperatures down to -20F.

B. Ballast type, lamp wattage, and rated voltage shall be as indicated on the plans. Each ballast shall be of the separate- component type, capable of reliable lamp starting down to -20F, and shall have a minimum power factor of .90.

2.03 LAMPS:

A. Incandescent and LED replacement lamps shall be rated at 130V. H.I.D. and fluorescent lamps shall be as specified on plans with ballasts as specified in the following specifications. Lamp codes listed are ANSI. All lamps shall be Sylvania, General Electric, or approved equivalent.

B. In porcelain keyless fixtures, provide medium base, self ballasted, A-line shape, fluorescent lamps, GE FLE15/2/A21 or equivalent.

2.04 DRIVERS:

A. LED drivers shall be electronic-type, labeled as compliant with radio frequency interference (RFI) requirements of FCC Title 47 Part 15, and comply with NEMA SSL 1 "Electronic Drivers for LED Devices, Arrays, or Systems". LED drivers shall have a sound rating of "A", have a minimum efficiency of 85%, and be rated for a THD of less than 20 percent at all input voltages.

B. Dimmable LED drivers shall be 0-10V type. Dimmable LED drivers shall be capable of dimming without LED strobing or flicker across their full dimming range.

C. Ballasts and drivers shall be rated for the ambient temperatures in which they are located. Outdoor fixtures shall be equipped with ballasts or drivers rated for reliable starting to -20 degrees F. Indoor fixtures located in areas with direct sunlight or above normal ambient temperatures shall have ballasts or drivers rated at 65 degrees C minimum.

2.05 POLES AND STANDARDS:

A. Each pole shall contain a hand-hole at the base, with an accessible ground lug capable of accepting up to #4 AWG stranded wire. Pole shall be furnished complete with base, anchor bolts, template, and other hardware necessary for the pole/luminaire and/or pole/base connections.

B. Concrete pole bases shall be provided by the General Contractor. The Electrical Contractor shall be responsible for the coordination of conduit and anchor bolts. An anchor bolt template shall be furnished to the Architect within 30 days of the signing of the Contract. Provide conduit in and out to a point 5' beyond the base.

C. The entire assembly (base, pole, brackets, luminaires) shall be designed to withstand 100 MPH winds.

2.06 INDOOR LIGHTING CONTROLS:

A. Provide combination daylight, timeclock and occupancy, lighting control system as shown on drawings. Include power packs, sensors, controllers, transformers, relays, wiring, etc. as required.

B. Sequence of operations:

1. Daylight control areas(All perimeter offices within 15' of exterior windows):
   a. Lights will be turned on with occupancy detection.
   b. Daylight sensors will dim fixtures to maintain 50 foot candles on working surface of desk.
   c. Lights will be turned off after 10 minutes with no occupancy detection.
2. Occupancy control areas(All enclosed interior areas):
   a. Lights will be turned on with occupancy detection.
   b. Lights will be turned off after 10 minutes with no occupancy detection.
3. Vacancy control areas(All enclosed interior areas):
   a. Lights will be turned manual by occupant.
   b. Lights will be turned off after 10 minutes with no occupancy detection.
4. Timeclock control areas (Areas not required to have vacancy / occupancy control):
   a. Provide astronomical time switch, lighting control system as shown on drawings. Include contactors, time switches, transformers, selector switches, relays, wiring, etc. as required.
   b. Set time clock(s) to operate contacts as scheduled hours by Owner.
   c. Time clock shall be astronomical seven-day programable type. Provide contacts as shown on plans. Time clock(s) shall be readily adjustable with the following features:
      1)Program backup
      2)Program capable of seven individual day types per wek.
      3)Holiday mode
      4)Manual override switch with maximum 2-hour limit.
      5)Manual override switch shall control a maximum of 5,000SF.
5. Egress path control areas (Corridors, Stairs, Vestibules, and similar spaces)
   a. During Timeclock on mode
      1)Ceiling/wall occupancy control, Lights will be turned on with occupancy detection
      2)Lights will be dimmed to 50 percent or less after 10 minutes with no occupancy detection.
   b. During Timeclock off mode
      1)Lights will be turned on with occupancy detection.
      2)Lights will be turned off after 10 minutes with no occupancy detection.

2.07 OUTDOOR LIGHTING CONTROLS:

A. Provide astronomical time switch, lighting control system as shown on drawings. Include contactors, time switches, transformers, selector switches, relays, wiring, etc. as required.

B. Set time clock(s) to operate contacts as scheduled hours by Owner.

C. Time clock shall be astronomical seven-day programable type. Provide contacts as shown on plans. Time clock shall be readily adjustable.

DIVISION 27 - COMMUNICATIONS

SECTION 27 20 00 - COMPUTER SYSTEM

1.01 DESCRIPTION:

A. Provide a complete system of raceways, pull boxes, outlet boxes, and terminals. Raceways shall form a complete path up walls and across inaccessible ceilings. Computer wiring may be run wild above accessible ceiling.

2.01 CONDUIT:

A. Conduit in the building shall be galvanized EMT, with plastic bushings on ends which are not terminated in a box.

2.02 WALL OUTLETS:

A. Wall outlets shall be 4" square pressed steel boxes, with single gang plaster ring. Connectors and coverplates are to be provided by the computer system installer.

B. Provide an alternate price for plaster rings at outlet location, and pullstrings in wall up to accessible ceiling, in lieu of conduit and boxes.

2.03 WIRING:

A. Wiring shall be provided by the computer system installer. Wiring run wild in air plenums shall be teflon coated or similarly rated for the application.

3.01 EXECUTION:

A. Provide pull strings in all conduit.

B. Field verify all computer outlet locations. Final locations and heights shall be as designated by the Architect or Owner's representative.

SECTION 27 30 00 - TELEPHONE SYSTEM

1.01 DESCRIPTION:

A. Provide a complete system of raceways, pull boxes, outlet boxes, and terminals. Raceways shall form a complete path up walls and across inaccessible ceilings. Telephone wiring may be run wild above accessible ceiling.

B. System will include exterior underground conduit routed to a point of connection(usually a pedestal or a power pole) as directed by the telephone company. Exterior conduit shall be sized and installed as directed by the telephone company.

2.01 CONDUIT:

A. Conduit in the building shall be galvanized EMT, with plastic bushings on ends which are not terminated in a box. Exterior underground conduit shall be schedule 40 PVC with solvent joints.

B. Wall outlets shall be 4" square pressed steel boxes, with single gang plaster ring. Connectors and coverplates are to be provided by the telephone system installer.

C. Provide an alternate price for plaster rings at outlet location, and pullstrings in wall up to accessible ceiling, in lieu of conduit and boxes.

2.02 TERMINALS:

A. Telephone terminals shall be constructed of 1/2" thick, fire resistant, interior finish plywood, painted white, sized as shown or required. Provide power and ground connection as required or shown on the plans.

2.03 WIRING:

A. Wiring shall be provided by the telephone system installer. Wiring run in air plenums shall be teflon coated or similarly rated for the application.

3.01 EXECUTION:

A. Provide pull strings in all conduit.

B. Exterior underground conduit shall use long radius, sweep ells. These elbows shall be schedule 80 PVC, or PVC coated GRC conduit.

C. Field verify all telephone outlet locations. Final locations and heights shall be as designated by the Architect or Owner's representative.

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

SECTION 28 10 00 - SECURITY ALARM SYSTEM

1.01 DESCRIPTION:

A. Provide a complete door security alarm system to audibly and visually annunciate door entry/exit at a master control panel. The door alarms may be individually reset at the master control panel as well as by-passed during certain hours of the day.

2.01 ANNUNCIATOR PANEL:

A. The annunciator panel shall be comprised of (3) 4 door modules each with individual door reset/bypass pushbuttons with associated LED's. The annunciator shall contain a common call placed LED, and alarm tone speaker, momentary action tone silencing push button. The tone silencing circuitry shall automatically reset after the alarm is reset. Each button cap shall be marked with the door identity. The panel shall be constructed of anodized aluminum, supplied with a recessed mounting frame.

2.02 CONTROL UNIT:

A. The control unit shall include a volume control and be configured for pulsating alarm signal. A power supply shall be provided in conjunction with the control unit.

2.03 DOOR CONTACTS:

A. Door contacts shall be normally closed mechanical door contacts.

2.04 WIRING:

A. Wiring shall be low voltage 18 AWG, run per the manufacturers instructions. Wiring may be run wild above accessible ceilings, in raceways in inaccessible locations.

2.05 MANUFACTURER:

A. The equipment shall be manufactured by Auth-Florence, Dukane or approved equivalent.

3.01 EXECUTION:

A. Install the security alarm system in accordance with the manufacturers instructions.

SECTION 28 30 00 - FIRE ALARM SYSTEM

1.01 GENERAL:

A. Provide an electronically-operated, double-supervised, closed-circuit, addressable type fire alarm system consisting of a control unit, manual-pull stations, alarm signals, automatic smoke and heat detectors, sprinkler monitor modules, and control relays as required, located as shown on the drawings and wired in accordance with the manufacturer's instructions to make a complete and workable system as hereinafter described.

B. Add, remove, move or change devices as required to provide a fire alarm system meeting the requirements of the authority having jurisdiction.

C. Provide equipment manufactured by Simplex Time Recorder Company (System 4000), or equivalent by Fire Lite, Notifier, or Silent Knight.

1.02 CODES AND REGULATIONS:

A. Fire Alarm system shall comply with NFPA 72(2013 edition).

2.01 CONTROL PANEL:

A. The control panel shall be modular with solid state, microprocessor based electronics. Panel shall contain an 80-character LCD display to indicate panel status. The panel shall include initiation device circuits, alarm indicating appliance circuit, supervised annunciator circuits, automatic battery charger and standby batteries.

B. The fire alarm control panel shall be Simplex Series 4010 or equivalent.

2.02 ANNUNCIATOR:

A. The annunciator shall be flush mounted and back lit using LED lights for power on, trouble and alarm indication. Remote annunciator shall have an 80-character LCD display. Units may be stacked within one enclosure to accommodate the proper number of zones. The annunciator shall include trouble silence, alarm silence, and system reset switches. The remote annunciator shall be electrically supervised from the control panel.

B. The annunciator shall be Simplex 4602 Series or equivalent.

2.03 MANUAL PULL STATIONS:

A. Manual pull stations shall be double action type made of red lexan with raised white letter; activation shall require two separate and distinct actions. Reset shall require a key common to the control panel.

B. Pull stations shall be Simplex 4099-series or equivalent.

2.04 SMOKE DETECTORS:

A. Smoke Detectors shall be a dual-chamber, photoelectric type detectors, complete with flashing status-indicating LED for visual supervision. When the detector is actuated, the flashing LED will latch on steady and at full brilliance. The detector may be reset by actuating the control panel reset switch.

B. The detectors shall be Simplex 4098 Series or equivalent.

2.05 AUTOMATIC HEAT DETECTORS:

A. Automatic heat detectors shall be combination rate-of-rise and fixed-temperature type. When the fixed temperature portion is activated, the units shall be non-restorable and give visual evidence of the operation.

B. The detectors shall be Simplex 4098 Series or equivalent.

2.06 DUCT SMOKE DETECTORS:

A. Duct smoke detectors shall be solid-state photoelectric type and shall operate on the light scattering principle. Detector construction shall be of the split type, a mounting base with twist-lock detecting head. Removal of the detector head shall interrupt the supervisory circuit. Detector shall be compatible with normally open fire alarm detection devices. Detector shall have an alarm LED visible through a transparent front cover.

B. The detectors shall be Simplex 4098 Series or equivalent.

2.07 ALARM HORN/ STROBE:

A. Alarm horn/ strobe shall be combination devices. They shall be polarized and operated by 24VDC. Each horn shall include separate wire lead for in/out wiring. The strobe shall be a xenon flashtube. The lexan lens shall be pyramidal in shape. The units shall have panel module and wiring installed to operate strobes independently when horns are turned off.

B. The alarms shall be Simplex 4903 Series or equivalent.

2.08 ALARM STROBE:

A. Alarm strobe shall be a xenon flashtube. The lexan lens shall be pyramidal in shape.

B. The alarms shall be Simplex 4904 Series or equivalent.

2.09 DOOR HOLDERS:

A. Door Holders shall be low voltage magnetic type with a minimum holding force of 25 lbs. The holders will be flush mounted wherever possible. Coordinate the exact location, voltage, etc with the door supplier to assure compatibility if the holders are provided by others.

B. The holders shall be Simplex 2088 Series or equivalent.

2.10 REMOTE ALARM INDICATORS:

A. Remote alarm indicators shall be provided for detectors, which are concealed above ceilings or in locked rooms. The indicators shall include test station switch for detectors above ceilings or in areas difficult to access. The remote alarm or remote alarm/test stations shall be Simplex series 2098 or equivalent.

2.11 AUTODIALER:

A. Install and wire an auto dialer unit for communication to a central station over leased phone wires. Field coordinate exact details with the Owner or Owner's representative.

2.12 MONITOR MODULE:

A. Provide an addressable monitor module for supervision of waterflow and tamper switches.

B. Simplex IAM or equivalent.

2.13 WIRING:

A. Provide a complete system of raceways, pull boxes, and outlet boxes. Raceways shall form a complete path up walls and across inaccessible ceilings. Wiring may be run wild above accessible ceilings.

3.01 INITIATION:

A. Upon the operation of any manual pull station or automatic initiating device (smoke detector, sprinkler flow switch, etc.):

1. Sound a continuous, audible and visible alarm in the entire building
2. Provide description of alarm condition via LCD display at FACP and remote annunciator.
3. In addition, provide controls and wiring required for the following functions:
   a. Shut down all air handling units, except exhaust fans.
   b. Send a signal to a remote monitoring station.

3.02 SYSTEM REPRESENTATIVE:

A. All system representative shall be an authorized engineered systems distributor located within a 50 mile radius of the project.

3.03 REMOTE INDICATING LIGHTS:

A. Remote indicating lights shall be provided for existing detectors obscured from view in locked rooms.

3.04 COMPONENT PROTECTION:

A. Provide a wire guard over any detector or horn in an area susceptible to physical damage.

3.05 FLOW AND TAMPER SWITCHES:

A. Wire all flow switches and tamper switches installed by the fire sprinkler contractor to monitor modules. Determine exact quantity and location before bidding and include the costs of any wiring and conduit.

3.06 HORN LIGHT:

A. Wire the exterior fire protection horn light where shown on the plans or as required by the Fire Department
