

NORTHWEST COLORADO CONSULTANTS, INC.
FIELD REPORT

Project: SBGBTR	Project No.: 21-12047	Date: 6/29/21
Location: SBS, CO	Report No.: 5-SP	Time: 1.5
Client: Steamboat Ski Corp.		Mileage: 6
		Engr. /Tech: JS

Work Performed:

As requested, we visited the project site on today's date to provide observations of the reinforcing steel and welded wire mesh placed for the elevator pit/sump pit slab, as well as the vault slab grade.

Remarks:

Based on our visual observations, the reinforcing steel noted above appeared to have been placed in general accordance with the Structural Drawings, Sheet No's. S5.02 and S1.04, both reinforcing steels placed for the sump pit was in general accordance with the approved steel shop plans.

It should be noted that today's observations are made with respect to the rebar placement only and do not constitute a complete special inspection of the structure. Elements such as layout, size, elevations, or other architectural aspects are not considered in our observations.

Verbal Discussions:

Jose Gutierrez of Sierra Concrete Company was notified of today's observations.
