Re: Steamboat Gondola Relocation
Steamboat Springs, CO 80487
Anthem Job Number 20-163

Dear Matthew:

Anthem Structural Engineers (Anthem) provided the structural engineering design for the referenced project. Our records indicate that during construction Anthem visited the project site once up to this point on June 23rd, 2021. This visit was made at the request of the general contractor to observe work on the structural elements of the building as defined in Section 202 of the 2018 International Building Code. NWCC has been onsite performing special inspections for reinforcing as well as casting concrete cylinders for strength testing. Anthem has informed the general contractor of any required corrections at noted deviations from the Construction Documents. Up to this point, very little if any retaining wall has been constructed on site.

The following structural elements were specifically observed by Anthem for general compliance with the contract documents:

1. Foundation wall construction for Vault

It should be noted that very little if any retaining walls/site walls have been constructed on site. Please contact our office once the items noted above are ready for final review.

Based on our field observations and information provided by the General Contractor and reports by NWCC, the above structural items, to the best of our knowledge, substantially conform to the Construction Documents prepared by Anthem. It should be noted that all Anthem observations to date are based on visual observations of representative elements of the structure only and that there is no claim, either stated or implied, that all conditions were observed.

Sincerely,

ANTHEM, LLC
