

Checklist #1 for Building Permit Applications

This list is provided to help speed up your plan review by making sure the basic required information is shown on your submittal. Plans will not be accepted if the required information is not shown or if an item marked as "N/A" is deemed to be applicable for this type of project. Additional information may be required based on site-specific conditions or to respond to City development review comments. Please call the appropriate City department if you have any questions related to a specific requirement. The applicant is required to review and sign the affidavit on the bottom of this checklist, accepting responsibility for any incomplete submittal and thus possible result of a delayed review time. For additional information regarding a particular requirement, see the Routt County Building Department website.
