Traffic Memorandum

- To: City of Steamboat Springs Engineering Department Attn: Ben Beall 136 10th Street Steamboat Springs, CO 80477
- From: Kari J. McDowell Schroeder, PE, PTOE
- Date: October 12, 2021
- Re: Steamboat Resort SSRC Base Area Plaza Improvements- Plaza Building Traffic Analysis Memorandum

Purpose:

The Alterra Mountain Company is planning on replacing the previous Gondola Plaza Building with a new Plaza Building. The traffic analysis of the previous gondola building removal was detailed in the February 12, 2021 *Steamboat Springs Base Village Redevelopment Traffic Memorandum*. This memorandum is intended to address the construction of the new Plaza Building. This submittal also includes the construction of a stage canopy directly northeast of the proposed Plaza Building.

Figure 1: Proposed Plaza Building and Stage Canopy

Trip Generation:

The proposed Plaza Building includes 12,900sf of restaurant space, including 1,700sf of exterior patio space. The analysis of the proposed Plaza Building was included in the *Steamboat Comprehensive Transportation Impact Analysis – Steamboat Resort Master Development Plan Amendment* by McDowell Engineering, September 16, 2021. A copy of the associated trip generation calculation in Table 1 is included as an attachment.

The trip generation calculations used ITE Land Use Code #932 High Turnover Sit-Down Restaurant to calculate the base trip generation. Additionally, an on-site trip reduction of 30% was taken to account for visitors and staff that are already at the resort and will patronize the new Plaza Building.

The proposed Plaza Building is anticipated to generate 1,013 trips per day (vpd), including 127 trips in the morning peak hour (vph) and 158vph in the evening peak hour.

The mode split of these new trips was conservatively based upon the current observed mode split. Steamboat believes that new visitors will primarily be destination guests that will arrive in a single vehicle or via air travel and rely on more transit and walking. Therefore, the mode split assumptions based upon current data are likely conservative for these new visitors.

Recommendations:

NEERING

The construction of the phased improvements associated with the proposed Plaza Building will impact several study area intersections.

Intersection #1 - Mt. Werner Circle and Après Ski Way: No modifications are required.

Intersection #2 - Mt. Werner Circle and Ski Time Square Drive: No modifications are required.

<u>Intersection #3 - Mt. Werner Road and Mt. Werner Circle</u>: This intersection currently is experiencing long southbound left delays and requires mitigation. This intersection has been identified and included in URAAC's future project list. The current operational deficiency is not caused by the future traffic associated with the Plaza Building's construction.

With the additional traffic anticipated from the Plaza Building improvements, the delay is anticipated to increase slightly.

As identified in the *Steamboat Comprehensive Transportation Impact Analysis*¹, an interim solution may be to improve the auxiliary turn lanes at this intersection. For the long-term condition, a roundabout would improve overall operations and reduce delay.

Intersection #4 - Mt. Werner Road and Steamboat Boulevard: No modifications are required.

Intersection #5 - Mt. Werner Road and Pine Grove Road: No modifications are required.

<u>Intersection #6 – JD Hays Way and US 40</u>: Section 2.6(3) of the *State Highway Access Code*³ requires a new access permit when there is a land use change and/or an access's volume is anticipated to increase by more than twenty percent (20%). Existing traffic data from the

intersection of JD Hays Way and S. Lincoln Ave (US 40) was compared to the forecasted Year 2024 traffic volume. This project is not anticipated to meet the 20% threshold and therefore does not require a new State Highway Access Permit at JD Hays Way.

<u>Parking Demand Management</u>: The applicant addressed the parking demand management in the *Environmental Impact Statement*⁴, associated *Record of Decisison*⁵, *Environmental Assessment*⁶, and associated *Decision Notice*⁷. These documents were approved by the USDA Forest Service. The applicant will work towards implementing a Parking Demand Management Plan.

Conclusion:

The construction of the proposed Plaza Building is accounted for and modeled in the *Steamboat Comprehensive Transportation Impact Analysis – Steamboat Resort Master Development Plan Amendment*¹ (*Comprehensive TIA*¹). No modifications from this analysis are anticipated. Specific infrastructure recommendations associated with the construction of the Plaza Building improvements are outlined above.

Please call if you would like any additional information or have any questions regarding this matter.

Sincerely, McDowell Engineering, LLC

[will M. Could Jehroeder

Kari J. McDowell, PE, PTOE Traffic Engineer
